Driving Forces James A. Dunn, 2010-12-01 To its critics the automobile is a voracious consumer of irreplaceable energy resources a leading polluter of the environment and a destroyer of cohesive communities The most outspoken opponents call for greater regulations and restrictions to ultimately replace the automobile as the country's primary means of transportation But their proposals all ignore one simple fact Americans love their cars Millions of citizens have made the automobile the most successful method of mass transportation ever developed and they are not about to give up the personal mobility it offers This book presents the controversial view that for the vast majority of Americans the automobile is not the problem but the solution to transportation needs While acknowledging the automobile's

significant drawbacks the author refutes much of the shrill rhetoric and doomsday predictions of its opponents He takes a skeptical look at the major policy initiatives to tax regulate and provide alternatives to the automobile pointing out that any policies designed to remove Americans from their cars without offering them a superior means of mobility are worse than useless and doomed to failure The book offers suggestions and guidelines for politically realistic initiatives that preserve the benefits of the automobile while building public support for policies that will reduce its negative effects on energy use and the environment Innovation in Public Transport Finance Shishir Mathur,2016-05-23 With all levels of governments currently and for the foreseeable future under significant fiscal stress any new transit funding mechanism is to be welcomed Value capture VC is one such mechanism which involves the identification and capture of a public infrastructure led increase in property value This book reviews four major VC mechanisms joint development projects special assessment districts impact fees and tax increment financing all of which are used to fund transit in the United States Through the study of prominent examples of these VC mechanisms from across the US this book evaluates their performance focusing on aspects such as equity revenue generating potential stakeholder support and the legal and policy environment It also conducts a comparative assessment of VC mechanisms to help policy makers and practitioners to choose one or a combination of VC mechanisms Although the book focuses on the US the use of the VC mechanisms and the urgent need for additional revenue to fund public transportation are world wide concerns Therefore an overview of the VC mechanisms in use internationally is also provided **Transportation Research Record** ,1998 *Mastering Innovation in the Public Sector* , Welcome to the forefront of knowledge with Cybellium your trusted partner in mastering the cutting edge fields of IT Artificial Intelligence Cyber Security Business Economics and Science Designed for professionals students and enthusiasts alike our comprehensive books empower you to stay ahead in a rapidly evolving digital world Expert Insights Our books provide deep actionable insights that bridge the gap between theory and practical application Up to Date Content Stay current with the latest advancements trends and best practices in IT AI Cybersecurity Business Economics and Science Each guide is regularly updated to reflect the newest developments and challenges Comprehensive Coverage Whether you re a beginner or an advanced learner Cybellium books cover a wide range of topics from foundational principles to specialized knowledge tailored to your level of expertise Become part of a global network of learners and professionals who trust Cybellium to guide their educational journey www.cybellium.com Bureaucracy James Q.
