Quilts Central Extensions Braid Actions And Finite Groups:

Quilts: Central Extensions, Braid Actions, and Finite Groups Tim Hsu, 2007-05-06 Quilts are 2 complexes used to analyze actions and subgroups of the 3 string braid group and similar groups This monograph establishes the fundamentals of quilts and discusses connections with central extensions braid actions and finite groups Most results have not previously appeared in a widely available form and many results appear in print for the first time This monograph is accessible to graduate students as a substantial amount of background material is included The methods and results may be relevant to researchers interested in infinite groups moonshine central extensions triangle groups dessins d'enfants and monodromy actions of braid groups *Yetter-Drinfel'd Hopf Algebras over Groups of Prime Order* Yorck Sommerhäuser, 2004-10-19 Being the first monograph devoted to this subject the book addresses the classification problem for semisimple Hopf algebras a field that has attracted considerable attention in the last years The special approach to this problem taken here is via semidirect product decompositions into Yetter Drinfel'd Hopf algebras and group rings of cyclic groups of prime order One of the main features of the book is a complete treatment of the structure theory for such Yetter Drinfel'd Hopf algebras

Lectures on the Automorphism Groups of Kobayashi-Hyperbolic Manifolds Alexander Isaev, 2007-03-11 In this monograph the author presents a coherent exposition of recent results on complete characterization of Kobayashi hyperbolic manifolds with high dimensional groups of holomorphic automorphisms These classification results can be viewed as complex geometric analogues of those known for Riemannian manifolds with high dimensional isotropy groups that were extensively studied in the 1950s 70s [Moonshine beyond the Monster](#) Terry Gannon, 2023-07-27 A monograph on Moonshine a mathematical physics topic for graduate students and researchers *Punctured Torus Groups and 2-Bridge Knot Groups (I)*

Hirotaka Akiyoshi, Makoto Sakuma, Masaaki Wada, Yasushi Yamashita, 2007-05-26 Here is the first part of a work that provides a full account of Jorgensen's theory of punctured torus Kleinian groups and its generalization It offers an elementary and self contained description of Jorgensen's theory with a complete proof Through various informative illustrations readers are naturally led to an intuitive synthetic grasp of the theory which clarifies how a very simple fuchsian group evolves into complicated Kleinian groups **Local Newforms for $\mathrm{GSp}(4)$** Brooks Roberts, Ralf Schmidt, 2007-07-18 Local Newforms for $\mathrm{GSp}(4)$ describes a theory of new and oldforms for representations of $\mathrm{GSp}(4)$ over a non archimedean local field This theory considers vectors fixed by the paramodular groups and singles out certain vectors that encode canonical information such as L factors and epsilon factors through their Hecke and Atkin-Lehner eigenvalues An appendix includes extensive tables about the results and the representations theory of $\mathrm{GSp}(4)$

Lyapunov Functions Using Radial Basis Functions Peter Giesl, 2007-04-04 The basin of attraction of an equilibrium of an ordinary differential equation can be determined using a Lyapunov function A new method to construct such a Lyapunov

function using radial basis functions is presented in this volume intended for researchers and advanced students from both dynamical systems and radial basis functions Besides an introduction to both areas and a detailed description of the method it contains error estimates and many examples

Fluctuation Theory for Lévy Processes Ronald A. Doney, 2007-04-19 Lévy processes i.e processes in continuous time with stationary and independent increments are named after Paul Lévy who made the connection with infinitely divisible distributions and described their structure They form a flexible class of models which have been applied to the study of storage processes insurance risk queues turbulence laser cooling and of course finance where the feature that they include examples having heavy tails is particularly important Their sample path behaviour poses a variety of difficult and fascinating problems Such problems and also some related distributional problems are addressed in detail in these notes that reflect the content of the course given by R Doney in St Flour in 2005
