What This Book Is This book is about radar It will teach you the essentials of radar the underlying principles It is not like an engineering handbook which provides detailed design equations without explaining either derivation or rationale It is not like a graduate school textbook which may be abstruse and esoteric to the point of incomprehensibility And it is not like an anthology of popular magazine articles which may be gaudy but superficial It is an attempt to distill the very complex rich technology of radar into its fundamentals tying them to the laws of nature on one end and to the most modern and complex systems on the other Who It's For If your work requires you to supervise or meet as coequals with radar systems engineers or designers this book will allow you to understand them to question them intelligently and perhaps to provide them with a perspective a dispassionate yet competent view that they lack If you are trained in another discipline but have been made the manager of a radar project or a system program that has one or more radars as subsystems this book will provide you with the tools you need not only to give your team members confidence but also to make a substantive technical contribution yourself **Knowledge Based Radar Detection, Tracking and Classification** Fulvio Gini,Muralidhar

Rangaswamy,2008-07-31 Discover the technology for the next generation of radar systems Here is the first book that brings together the key concepts essential for the application of Knowledge Based Systems KBS to radar detection tracking classification and scheduling The book highlights the latest advances in both KBS and radar signal and data processing presenting a range of perspectives and innovative results that have set the stage for the next generation of adaptive radar systems The book begins with a chapter introducing the concept of Knowledge Based KB radar The remaining nine chapters focus on current developments and recent applications of KB concepts to specific radar functions Among the key topics explored are Fundamentals of relevant KB techniques KB solutions as they apply to the general radar problem KBS applications for the constant false alarm rate processor KB control for space time adaptive processing KB techniques applied to existing radar systems Integrated end to end radar signals Data processing with overarching KB control All chapters are self contained enabling readers to focus on those topics of greatest interest Each one begins with introductory remarks moves on to detailed discussions and analysis and ends with a list of references Throughout the presentation the authors offer examples of how KBS works and how it can dramatically improve radar performance and capability Moreover the authors forecast the impact of KB technology on future systems including important civilian military and homeland defense applications With chapters contributed by leading international researchers and pioneers in the field this text is recommended for both students and professionals in radar and sonar detection tracking and classification and radar resource management **Japanese Technical Periodical Index** ,1986 **American Men & Women of Science** ,2008
