S Programming:

S Programming William Venables, B.D. Ripley, 2013-03-09 S is a high level language for manipulating analysing and displaying data It forms the basis of two highly acclaimed and widely used data analysis software systems the commercial S PLUS and the Open Source R This book provides an in depth guide to writing software in the S language under either or both of those systems It is intended for readers who have some acquaintance with the S language and want to know how to use it more effectively for example to build reusable tools for streamlining routine data analysis or to implement new statistical methods One of the outstanding strengths of the S language is the ease with which it can be extended by users S is a functional language and functions written by users are first class objects treated in the same way as functions provided by the system S code is eminently readable and so a good way to document precisely what algorithms were used and as much of the implementations are themselves written in S they can be studied as models and to understand their subtleties The current implementations also provide easy ways for S functions to call compiled code written in C Fortran and similar languages this is documented here in depth Increasingly S is being used for statistical or graphical analysis within larger software systems or for whole vertical market applications The interface facilities are most developed on Windows and these are covered with worked examples The authors have written the widely used Modern Applied Statistics with S PLUS now in its third edition and several software libraries that enhance S PLUS and R these and the examples used in both books are available on the Internet Dr W N Venables is a senior Statistician with the CSIRO CMIS Environmetrics Project in Australia having been at the Department of Statistics University of Adelaide for many years previously Professor B D Ripley holds the Chair of Applied Statistics at the University of Oxford and is the author of four other books on spatial statistics simulation pattern recognition and neural networks Both authors are known and respected throughout the international S and R communities for their books workshops short courses freely available software and through their extensive contributions to the S news and R mailing lists

Programming Language Implementation and Logic Programming Jan Małuszyński, Martin Wirsing, 1991-08-14 This volume contains the papers which have been accepted for presentation at the Third International Symposium on Programming Language Implementation and Logic Programming PLILP 91 held in Passau Germany August 26 28 1991 The aim of the symposium was to explore new declarative concepts methods and techniques relevant for the implementation of all kinds of programming languages whether algorithmic or declarative ones The intention was to gather

researchers from the fields of algorithmic programming languages as well as logic functional and object oriented programming This volume contains the two invited talks given at the symposium by H Ait Kaci and D B MacQueen 32 selected papers and abstracts of several system demonstrations The proceedings of PLILP 88 and PLILP 90 are available as Lecture Notes in Computer Science Volumes 348 and 456

Automata, Languages and Programming Michael S. Paterson, 1990 In subvolume 27C1 magnetic and related properties of binary lanthanide oxides have been compiled This subvolume covers data obtained since 1980 and can therefore be regarded as supplement to volume III 12c While in the previous volume the majority of magnetic data was obtained either from magnetometric measurements or from neutron diffraction for the present data the main emphasis is devoted to related properties without which however the understanding of classical magnetic properties is impossible A second part 27C2 will deal with binary oxides of the actinide elements

COMPUTER PROGRAMMING IN FORTRAN 90 AND 95 V. RAJARAMAN, 1997-01-01 This book introduces Computer Programming to a beginner using Fortran 90 and its recent extension Fortran 95 While Fortran 77 has been used for many years and is currently very popular computer scientists have been seriously concerned about good programming practice to promote development of reliable programs Thus the International Standards Organization set up a group to modernise Fortran and introduce new features which have made languages such as Pascal and C popular The committee took over a decade to come up with the new standard Fortran 90 Fortran 90 has introduced many new features in Fortran such as recursion pointers user defined data types etc which were hitherto available only in languages such as Pascal and C Fortran 90 is not an evolutionary change of Fortran 77 but is drastically different Though Fortran 77 programs can be run using a Fortran 90 compiler Fortran 90 is so different that the author felt it was not a good idea to just revise Fortran 77 and introduce Fortran 90 in some places in the book Thus this book is entirely new and introduces Fortran 90 from basics In 1996 some small extensions were made to Fortran 90 and has called Fortran 95 This book also discusses these features As all new programs in Fortran will henceforth be written in Fortran 90 it is essential for students to learn this language The methodology of presentation however closely follows the one used by the author in his popular book on Fortran 77

Generative Programming and Component Engineering Don Batory, Charles Consel, Walid Taha, 2003-06-30 This volume constitutes the proceedings of the 1st ACM SIGPLAN SIGSOFT International Conference on Generative Programming and Component Engineering GPCE 2002 held October 6-8 2002 in Pittsburgh PA USA as part of the PLI 2002 event which also included ICFP PPDP and related workshops The future of Software Engineering lies in the automation of tasks that are

performed manually today Generative Programming developing programs that synthesize other programs Component Engineering raising the level of modularization and analysis in application design and Domain Specific Languages elevating program specifications to compact domain specific notations that are easier to write and maintain are key technologies for automating program development In a time of conference and workshop proliferation GPCE represents a counter trend in the merging of two distinct communities with strongly overlapping interests the Generative and Component Based Software Engineering Conference GCSE and the International Workshop on the Semantics Applications and Implementation of Program Generation SAIG Researchers in the GCSE community address the topic of program automation from a contemporary software engineering viewpoint SAIG correspondingly represents a community attacking automation from a more formal programming languages viewpoint Together their combination provides the depth of theory and practice that one would expect in a premier research conference Three prominent PLI invited speakers lectured at GPCE 2002 Neil Jones University of Copenhagen Catuscia Palamidessi Penn State University and Janos Sztipanovits Vanderbilt University GPCE 2002 received 39 submissions of which 18 were accepted
