Mathematical Programming And Financial Objectives For Scheduling Projects:

Mathematical Programming and Financial Objectives for Scheduling Projects Alf Kimms, 2012-12-06 Mathematical Programming and Financial Objectives for Scheduling Projects focuses on decision problems where the performance is measured in terms of money. As the title suggests, special attention is paid to financial objectives and the relationship of financial objectives to project schedules and scheduling. In addition, how schedules relate to other decisions is treated in detail. The book demonstrates that scheduling must be combined with project selection and financing and that scheduling helps to give an answer to the planning issue of the amount of resources required for a project. The author makes clear the relevance of scheduling to cutting budget costs. The book is divided into six parts. The first part gives a brief introduction to project management. Part two examines scheduling projects in order to maximize their net present value. Part three considers capital rationing. Many decisions on selecting or rejecting a project cannot be made in isolation and multiple projects must be taken fully into account. Since the requests for capital resources depend on the schedules of the projects, scheduling taken on more complexity. Part four studies the resource usage of a project in greater detail. Part five discusses cases where the processing time of an activity is a decision to be made. Part six summarizes the main results that have been accomplished.

4th Party Cyber Logistics for Air Cargo Sung-Chi Chu, Lawrence C. Leung, Yee Van Hui, Waiman Cheung, 2006-04-11 4th Party Cyber Logistics For Air Cargo is a technical discussion for researchers and practitioners to understand the issues, models, and future directions of air cargo logistics in the cyber era. This book introduces the many aspects of planning and control of air cargo logistics processes in an e-Business environment. The authors approach this subject matter from the perspective of the logistics service providers. There is tremendous potential of achieving industry-wide collaboration between agents of the air cargo industry via an e-Business community platform. At the same time, there are many intellectually challenging problems regarding the architecture, ownership, decision support environment, and knowledge management of such an e-Business platform. The authors provide an evolutionary view to conceptualize the developments of websites where e-Commerce activities and e-Business activities co-exist. Four Web eras are detailed, providing an impetus for the development of frameworks of an e-Business platform for air cargo logistics or e-Platform. The conceptual framework captures the new elements in cyber logistics and what the framework can do for the industry. [Handbook of Markov Decision Processes](#)

Eugene A. Feinberg, Adam Shwartz, 2012-12-06 Eugene A. Feinberg, Adam Shwartz This volume deals with the theory of Markov Decision Processes (MDPs) and their applications. Each chapter was written by a leading expert in the respective area. The papers cover major research areas and methodologies and discuss open questions and future research directions. The papers can be read independently with the basic notation and concepts of Section 1.2. Most chapters should be accessible by graduate or advanced undergraduate students in fields of operations research, electrical engineering, and computer science. 1 AN OVERVIEW OF MARKOV DECISION PROCESSES The theory of Markov Decision Processes, also known under several

other names including sequential stochastic optimization discrete time stochastic control and stochastic dynamic programming studies sequential optimization of discrete time stochastic systems The basic object is a discrete time stochastic system whose transition mechanism can be controlled over time Each control policy defines the stochastic process and values of objective functions associated with this process The goal is to select a good control policy In real life decisions that humans and computers make on all levels usually have two types of impacts i they cost or save time money or other resources or they bring revenues as well as ii they have an impact on the future by influencing the dynamics In many situations decisions with the largest immediate profit may not be good in view of future events MDPs model this paradigm and provide results on the structure and existence of good policies and on methods for their calculation

Optimal Inventory Modeling of Systems Craig C. Sherbrooke, 2006-04-11 Most books on inventory theory use the item approach to determine stock levels ignoring the impact of unit cost echelon location and hardware indenture *Optimal Inventory Modeling of Systems* is the first book to take the system approach to inventory modeling The result has been dramatic reductions in the resources to operate many systems fleets of aircraft ships telecommunications networks electric utilities and the space station Although only four chapters and appendices are totally new in this edition extensive revisions have been made in all chapters adding numerous worked out examples Many new applications have been added including commercial airlines experience gained during Desert Storm and adoption of the Windows interface as a standard for personal computer models

Traffic Theory Denos C. Gazis, 2006-04-11 Everything should be made as simple as possible but not simpler Albert Einstein Traffic Theory like all other sciences aims at understanding and improving a physical phenomenon The phenomenon addressed by Traffic Theory is of course automobile traffic and the problems associated with it such as traffic congestion But what causes congestion Some time in the 1970s Doxiades coined the term oikomenopolis and oikistics to describe the world as man's living space In Doxiades terms persons are associated with a living space around them which describes the range that they can cover through personal presence In the days of old when the movement of people was limited to walking an individual oikomenopolis did not intersect many others The automobile changed all that The term range of good was also coined to describe the maximal distance a person can and is willing to go in order to do something useful or buy something Traffic congestion is caused by the intersection of a multitude of such ranges of good of many people exercising their range utilisation at the same time Urban structures containing desirable structures contribute to this intersection of ranges of good

xii Preface In a biblical mood I opened a 1970 paper entitled Traffic Control From Hand Signals to Computers with the sentence In the beginning there was the Ford

Potential Function Methods for Approximately Solving Linear Programming

Problems: Theory and Practice Daniel Bienstock, 2002-08-31 Potential Function Methods For Approximately Solving Linear Programming Problems breaks new ground in linear programming theory The book draws on the research developments in three broad areas linear and integer programming numerical analysis and the computational architectures which enable speedy high level algorithm design During the last ten years a new body of research within the field of optimization research has emerged which seeks to develop good approximation algorithms for classes of linear programming problems This work both has roots in fundamental areas of mathematical programming and is also framed in the context of the modern theory of algorithms The result of this work in which Daniel Bienstock has been very much involved has been a family of algorithms with solid theoretical foundations and with growing experimental success This book will examine these algorithms starting with some of the very earliest examples and through the latest theoretical and computational developments

Uncertainty in the Electric Power Industry Christoph Weber, 2005 Around the world liberalization and privatization in the electricity industry have lead to increased competition among utilities At the same time utilities are now exposed more than ever to risk and uncertainties which they cannot pass on to their customers through price increases as in a regulated environment Especially electricity generating companies have to face volatile wholesale prices fuel price uncertainty limited long term hedging possibilities and huge to a large extent sunk investments In this context *Uncertainty in the Electric Power Industry Methods and Models for Decision Support* aims at an integrative view on the decision problems that power companies have to tackle It systematically examines the uncertainties power companies are facing and develops models to describe them including an innovative approach combining fundamental and finance models for price modeling The optimization of generation and trading portfolios under uncertainty is discussed with particular focus on CHP and is linked to risk management Here the concept of integral earnings at risk is developed to provide a theoretically sound combination of value at risk and profit at risk approaches adapted to real market structures and market liquidity Also methods for supporting long term investment decisions are presented technology assessment based on experience curves and operation simulation for fuel cells and a real options approach with endogenous electricity prices

Nested Partitions Method, Theory and Applications Leyuan Shi, Sigurdur Ólafsson, 2008-10-30 The subject of this book is the nested partitions method NP a relatively new optimization method that has been found to be very effective solving discrete optimization problems Such discrete problems are common in many practical applications and the NP method is thus useful in diverse application areas It can be applied to both operational and planning problems and has been demonstrated to effectively solve complex problems in both manufacturing and service industries To illustrate its broad applicability and effectiveness in this book we will show how the NP method has been successful in solving complex problems in planning and scheduling logistics and transportation supply chain design data mining and health care All of these diverse applications have one characteristic in common they all lead to complex large scale discrete optimization problems that are intractable using traditional optimization methods 1 1

Large Scale Optimization In developing the NP method we will consider optimization problems that can be stated mathematically in the following generic form $\min_{x \in X} f(x)$ where the solution space or feasible region X is either a discrete or bounded set of feasible solutions. We denote a solution to this problem x and the objective function value $f(x)$.

Recent Advances in Computational Optimization Stefka Fidanova, 2013-04-10 Optimization is part of our everyday life. We try to organize our work in a better way and optimization occurs in minimizing time and cost or the maximization of the profit quality and efficiency. Also many real world problems arising in engineering, economics, medicine and other domains can be formulated as optimization tasks. This volume is a comprehensive collection of extended contributions from the Workshop on Computational Optimization. This book presents recent advances in computational optimization. The volume includes important real world problems like parameter settings for controlling processes in bioreactor, robot skin wiring strip packing, project scheduling, tuning of PID controller and so on. Some of them can be solved by applying traditional numerical methods but others need a huge amount of computational resources. For them it is shown that is appropriate to develop algorithms based on metaheuristic methods like evolutionary computation, ant colony optimization, constraint programming etc.

Dynamic Portfolio Strategies: quantitative methods and empirical rules for incomplete information Nikolai Dokuchaev, 2012-12-06 Dynamic Portfolio Strategies: Quantitative Methods and Empirical Rules for Incomplete Information investigates optimal investment problems for stochastic financial market models. It is addressed to academics and students who are interested in the mathematics of finance, stochastic processes and optimal control and also to practitioners in risk management and quantitative analysis who are interested in new strategies and methods of stochastic analysis. While there are many works devoted to the solution of optimal investment problems for various models, the focus of this book is on analytical strategies based on technical analysis which are model free. The technical analysis of these strategies has a number of characteristics. Two of the more important characteristics are 1) they require only historical data and 2) typically they are more widely used by traders than analysis based on stochastic models. Hence it is the objective of this book to reduce the gap between model free strategies and strategies that are optimal for stochastic models. We hope that researchers, students and practitioners will be interested in some of the new empirically based methods of technical analysis strategies suggested in this book and evaluated via stochastic market models.

Risk Analysis Foundations, Models, and Methods Louis Anthony Cox Jr., 2012-12-06 Risk Analysis Foundations: Models and Methods fully addresses the questions of What is health risk analysis and How can its potentialities be developed to be most valuable to public health decision makers and other health risk managers. Risk analysis provides methods and principles for answering these questions. It is divided into methods for assessing, communicating and managing health risks. Risk assessment quantitatively estimates the health risks to individuals and to groups from hazardous exposures and from the decisions or activities that create them. It applies specialized models and methods to quantify likely exposures and their resulting health risks. Its goal is to produce information to improve

decisions It does this by relating alternative decisions to their probable consequences and by identifying those decisions that make preferred outcomes more likely Health risk assessment draws on explicit engineering biomathematical and statistical consequence models to describe or simulate the causal relations between actions and their probable effects on health Risk communication characterizes and presents information about health risks and uncertainties to decision makers and stakeholders Risk management applies principles for choosing among alternative decision alternatives or actions that affect exposure health risks or their consequences

Models & Methods for Project Selection Samuel B. Graves, Jeffrey L. Ringuest, 2012-12-06 Models Methods for Project Selection systematically examines in this book treatment the latest work in the field of project selection modeling The models presented are drawn from mathematical programming decision theory and finance These models are examined in two categorical streams the management science stream and the financial model stream The book describes the assumptions and limitations of each model and provides appropriate solution methodologies Its organization follows three main themes Criteria for Choice Chapters 1 3 investigate the effect of the choice of optimization criteria on the results of the portfolio optimization problem Risk and Uncertainty Chapters 4 7 deal with uncertainty in the project selection problem Non Linearity and Interdependence These chapters deal with problems of non linearity and interdependence as they arise in the project selection problem Chapters 8 9 and 10 present solution methodologies which can be used to solve these most general project selection models

Evolutionary Optimization Ruhul Sarker, Masoud Mohammadian, Xin Yao, 2006-04-11 Evolutionary computation techniques have attracted increasing attention in recent years for solving complex optimization problems They are more robust than traditional methods based on formal logics or mathematical programming for many real world OR MS problems Evolutionary computation techniques can deal with complex optimization problems better than traditional optimization techniques However most papers on the application of evolutionary computation techniques to Operations Research Management Science OR MS problems have scattered around in different journals and conference proceedings They also tend to focus on a very special and narrow topic It is the right time that an archival book series publishes a special volume which includes critical reviews of the state of art of those evolutionary computation techniques which have been found particularly useful for OR MS problems and a collection of papers which represent the latest development in tackling various OR MS problems by evolutionary computation techniques This special volume of the book series on Evolutionary Optimization aims at filling in this gap in the current literature The special volume consists of invited papers written by leading researchers in the field All papers were peer reviewed by at least two recognised reviewers The book covers the foundation as well as the practical side of evolutionary optimization

Linear and Nonlinear Programming David G. Luenberger, Yinyu Ye, 2008-07-07 This third edition of the classic textbook in Optimization has been fully revised and updated It comprehensively covers modern theoretical insights in this crucial computing area and will be required reading for analysts and operations researchers in a variety of fields The book

connects the purely analytical character of an optimization problem and the behavior of algorithms used to solve it Now the third edition has been completely updated with recent Optimization Methods The book also has a new co author Yinyu Ye of California s Stanford University who has written lots of extra material including some on Interior Point Methods
