

1.6 Mathematical Structures

A structure with a binary operation $\square$ may contain a distinguished object e , with the property $x \square e = e \square x = x$ for all x in the collection. We call e an **identity**(幺元) for $\square$.

Theorem 5. If e is an identity for a binary operation $\square$, then e is unique.

Proof:

Assume another object i also has the identity property, so $x \square i = i \square x = x$.

Then $e \square i = e$, but since e is an identity for $\square$, $e \square i = i$.

Thus, $i = e$.

Therefore there is at most one object with the identity property for $\square$.

Mathematical Structures Im Ii
