Mathematical Discovery:

Proofs and Refutations Imre Lakatos, John Worrall, Elie Zahar, 1976-01-01 Proofs and Refutations is essential reading for all those interested in the methodology the philosophy and the history of mathematics Much of the book takes the form of a discussion between a teacher and his students They propose various solutions to some mathematical problems and investigate the strengths and weaknesses of these solutions Their discussion which mirrors certain real developments in the history of mathematics raises some philosophical problems and some problems about the nature of mathematical discovery or creativity Imre Lakatos is concerned throughout to combat the classical picture of mathematical development as a steady accumulation of established truths He shows that mathematics grows instead through a richer more dramatic process of the successive improvement of creative hypotheses by attempts to prove them and by criticism of these attempts the logic of proofs and refutations

Mathematical Discovery on Understanding, Learning and Teaching Problem Solving, Volumes I and II George Polya, 1981-04-24 A unique heuristic approach to mathematical discovery and problem solving This combined edition of Mathematical Discovery On Understanding Learning and Teaching Problem Solving is unique among mathematics texts Espousing a heuristic approach to mathematical problem solving the text may be followed sequentially or according to instructors individualized curricula Beginning with a discussion of patterns and practical approaches to problem solving the book then presents examples from various branches of math and science to help students discover how to solve problems on their own an invaluable skill for the classroom and beyond

Science and Method Henri Poincaré, Francis Maitland, 2003-01-01 Classic account of basic methodology and psychology of scientific discovery explains how scientists analyze and choose their working facts and explores the nature of experimentation theory and the mind 1914 edition

Mathematical Discovery George Pólya, 2000 *Mathematical Discovery* Andrew Bruckner, Brian Thomson, Judith Bruckner, 2011-09-29 This book is an outgrowth of classes given at the University of California Santa Barbara mainly for students who had little mathematical background Many of the students indicated they never understood what mathematics was all about beyond what they learned in algebra and geometry Was there any more math ematics to be discovered or created How could one actually discover or create new mathematics In order to give these students some sort of answers to such questions we designed a course in which the students could actually participate in the discovery of mathematics This version of our textbook has all illustrations in color A less expensive grayscale version is also available

Machine Learning Tom M. Mitchell, Jaime G. Carbonell, Ryszard S. Michalski, 2012-12-06 One of the currently most active research areas within Artificial Intelligence is the field of Machine Learning which involves the study and development of computational models of learning processes A major goal of research in this field is to build computers capable of improving their performance with practice and of acquiring knowledge on their own The intent of this book is to provide a snapshot of this field through a broad representative set of easily assimilated short papers As such this book is intended to complement the two volumes of Machine Learning An Artificial Intelligence Approach Morgan Kaufman Publishers which provide a smaller number of in depth research papers Each of the 77 papers in the present book summarizes a current research effort and provides references to longer expositions appearing elsewhere These papers cover a broad range of topics including research on analogy conceptual clustering explanation based generalization incremental learning inductive inference learning apprentice systems machine discovery theoretical models of learning and applications of machine learning methods A subject index is provided to assist in locating research related to specific topics The majority of these papers were collected from the participants at the Third International Machine Learning Workshop held June 24-26 1985 at Skytop Lodge Skytop Pennsylvania While the list of research projects covered is not exhaustive we believe that it provides a representative sampling of the best ongoing work in the field and a unique perspective on where the field is and where it is headed

Laws of Creation Ronald A. Cass, Keith N Hylton, 2013-01-01 Cass and Hylton explain how technological advances strengthen the case for intellectual property laws and argue convincingly that IP laws help create a wealthier more successful more innovative society than alternative legal systems Ignoring the social value of IP rights and making what others create free would be a costly mistake indeed

Carlo Cellucci, 2022-03-07 This book offers an alternative to current philosophy of mathematics heuristic philosophy of mathematics In accordance with the heuristic approach the philosophy of mathematics must concern itself with the making of mathematics and in particular with mathematical discovery In the past century mainstream philosophy of mathematics has claimed that the philosophy of mathematics cannot concern itself with the making of mathematics but only with finished mathematics namely mathematics as presented in published works On this basis mainstream philosophy of mathematics has maintained that mathematics is theorem proving by the axiomatic method This view has turned out to be untenable because of Gödel's incompleteness theorems which have shown that the view that mathematics is theorem proving by the axiomatic method does not account for a large number of basic features of mathematics By using the heuristic approach this book argues that mathematics is not theorem proving by the axiomatic method but is rather problem solving by the analytic method The author argues that this view can account for the main items of the mathematical process those being mathematical objects demonstrations definitions diagrams notations explanations applicability beauty and the role of mathematical knowledge **Philosophy And Methodology Of Information: The Study Of Information In The Transdisciplinary Perspective**

Gordana Dodig-crnkovic, Mark Burgin, 2019-04-22 The book gives up to date multi aspect exposition of the philosophy and methodology of information and related areas within the nascent field of the study of information It presents the most recent achievements ideas and opinions of leading researchers in this domain as well as from physicists biologists and social scientists Collaboration of researchers from different areas and fields opens new perspectives for the understanding of information essential in the innovative development of science technology and society The book is meant for readers conducting research into any aspect of information information society and information technology The ideas presented give new insights for those who develop or implement scientific technological or social applications They are especially for those who are participating in setting the goals for science in general and sciences of

Meaning in Mathematics John Polkinghorne, 2011-05-19 Is mathematics a highly sophisticated intellectual game in which the adepts display their skill by tackling invented problems or are mathematicians engaged in acts of discovery as they explore an independent realm of mathematical reality Why does this seemingly abstract discipline provide the key to unlocking the deep secrets of the physical universe How one answers these questions will significantly influence metaphysical thinking about reality This book is intended to fill a gap between popular wonders of mathematics books and the technical writings of the philosophers of mathematics The chapters are written by some of the world s finest mathematicians mathematical physicists and philosophers of mathematics each giving their perspective on this fascinating debate Every chapter is followed by a short response from another member of the author
