Kersten, 2013-04-18 Intended for scholars in the fields of philosophy history of science and music this book examines the legacy of the historical coincidence of the emergence of science and opera in the early modern period But instead of regarding them as finished products or examining their genesis or common ground or parallel ideas opera and science are explored by a phenomenology of the formulations of consciousness Gurwitsch as compossible tasks to be accomplished in common Schutz which share an ideal possibility or essence Husserl Although the ideas of Galileo and Monteverdi form the parameters of the domain of phenomenological clarification the scope of discussion extends from Classical ideas of science and music down to the beginning of the nineteenth century but always with reference to the experience of sharing the sociality of a common world from which they are drawn Plessner and to which those ideas have given shape meaning and even substance At the same time this approach provides a non historicist alternative to understanding the arts and science of the modern period by critically clarifying the idea of whether their compossibility can rest on any other formulation of consciousness      The Grove Companion to Samuel Beckett C. and without expensive hardware e.g. supercomputers. The core of every algorithm described in the book can be implemented in a few lines of code using just about any popular programming language. Python snippets are provided. Through the use of new multiple examples this edition demonstrates that if we understand our data and if we know how to ask the right questions we can learn a great deal from large and complex data collections. The book will assist students and professionals from all scientific backgrounds who are interested in stepping outside the traditional boundaries of their chosen academic disciplines. Presents new methodologies that are widely applicable to just about any project involving large and complex datasets. Offers readers informative new case studies across a range of scientific and engineering disciplines. Provides insights into semantics identification, deidentification, vulnerabilities, and regulatory/legal issues. Utilizes a combination of pseudocode and very short snippets of Python code to show readers how they may develop their own projects without downloading or learning new software.
