During 1978-1982 the International Institute for Applied Systems Analysis IIASA was responsible for a research project on Environmental Quality Control and Management. The project was begun under the direction of Professor O. F. Vasiliev from the Institute of Hydrodynamics of the Siberian Branch of the USSR Academy of Sciences and was subsequently led by myself. This review is very much a reflection of that IIASA project. The major themes of the IIASA project were: research into the methodological aspects of modeling river and lake systems; some of the principal results of this research appear in M. B. Beck and G. van Straten (eds), 1983, *Uncertainty and Forecasting of Water Quality*, Springer, Berlin; West and in K. Fedra (1983), *Environmental Modeling Under Uncertainty: Monte Carlo Simulation*, IIASA Research Report RR-83-28; case studies in the application of mathematical models to lake eutrophication control, results of which are summarized in L. Somlyódy, S. Herodek and J. Fischer (eds), 1983, *Eutrophication of Shallow Lakes: Modeling and Management*, The Lake Balaton Case Study, IIASA Collaborative Proceedings CP-83-S3 and in K.
