Beating the Numbers ,1980 *Best Practices in Gifted Education* Ann Robinson, Bruce M. Shore, Donna Enersen, 2021-09-03 A gifted education Legacy Award winner *Best Practices in Gifted Education* provides concise up to date research based advice to educators administrators and parents of gifted and talented youth The 29 practices included in this

The interest in culturally diverse and low income learners, the means to identify talents, and the need for curriculum that appropriately challenges high ability youth constitute just a few of the 29 practices. Each practice is organized into a chapter containing two sections: What We Know and What We Can Do. The first section briefly describes the practice and summarizes the research. The second section suggests what course of action a parent, teacher, or administrator might take at home, in the classroom, or at school. The book is a must have for those who want a guide that makes a connection between research and practical action in gifted education. A service publication of the National Association for Gifted Children, Washington, DC. Learning and Motivation in the Classroom Scott G. Paris, Gary M. Olson, Harold W. Stevenson, 2017-09-13. Throughout the twentieth century, there had been substantial links between scientific psychology and education. Binet, Dewey, Thorndike, and other early pioneers were strongly interested in both realms. Taking advantage of a period of enthusiasm, this title, originally published in 1983, looks at the amalgamation of the recent advances at the time in theory and research in education and psychology with a particular focus on cognition, motivation, and social policy. This volume presents and discusses the implications of this work on learning and motivation for educational policy.

The Profile of American Youth R. Darrell Bock, 1984. Gender and Fair Assessment Warren W. Willingham, Nancy S. Cole, 2013-12-16. There have been many important changes in the participation of women and men in American society over the past quarter century. Tests play a role in those changes by providing evidence of the diverse achievement and proficiency of women and men. They aid the learning process and reflect inequalities in opportunity to learn and participate. In addition, they provide useful information in considering what alternatives in education and work make most sense for individuals and influence views about groups of students, educational programs, and a wide range of issues. For all of these reasons, it is important that tests assess fairly and reflect accurately the ways young people are and are not achieving, as well as desired. The test performance of women and men is a research topic of historical interest and has received much attention in recent years. Because of this increased interest, there is a great deal of new research and data available. The purpose of the study presented in this volume was to review this new information with two objectives in mind: to clarify patterns of gender difference and similarity in test performance and related achievements, and to see what implications those findings might have for fair assessment and, as a corollary, to examine the assessment process as a possible source of gender differences. This study is interested in tests used in education to assess developed knowledge and skill. In order to gain a broader view of gender similarity and difference, the contributors looked at other types of measures and other characteristics of young women and men. Their hope is to contribute to a firmer basis for insuring fairness in tests, an objective which is particularly important as the field moves increasingly to new forms of assessment in which there is less experience.
