Advanced Mathematics - Connecting More Than 60 Magic Tricks To High-level Math Ricardo V Teixeira, Jang-woo Park, 2020-05-29 This delightful book connects mathematical concepts in a dozen areas to magic tricks. Expositions of the mathematics precede description and analysis of the tricks. The expositions are too short for in-depth learning; the intent is to give sophomores a taste of the content and ideas of later mathematics courses. Each chapter features exercises on the mathematics and students can have fun practicing the tricks. *Mathematics Magazine* Teixeira and Park present over 60 different magic tricks while introducing students to high-level math areas. Readers will learn really interesting ideas that will better prepare them for future courses and help them find areas they might want to study deeper. And as a side effect, students will learn amazing magic tricks, century-old secrets and details from famous magicians and mathematicians. The material was written to quickly present key concepts in several mathematical areas in a direct way. Little or no proficiency in math is assumed. In fact, students do not require any Calculus knowledge. And since chapters are almost independent from each other, this book also works as an introduction to several other courses. Topics covered include mathematical proofs, probability, abstract algebra, linear algebra, mathematical computing, number theory, coding theory, geometry, topology, real analysis, numerical analysis, and history of math.

Revival: Philosophy and the Physicists (1937) Lizzie Susan Stebbing, 2018-05-08 This book is written by a philosopher for other philosophers and for that section of the reading public who buy in large quantities and no doubt devour with great earnestness the popular books written by scientists for their enlightenment. We common readers to adapt a phrase from Samuel Johnson are fitted neither to criticize physical theories nor to decide what precisely are their implications. We are dependent upon the scientists for an exposition of those developments which so we find them proclaiming have important and far-reaching consequences for philosophy. Unfortunately, however, our popular expositors do not always serve us very well. The two who are most widely read in this country are Sir Arthur Eddington and Sir James Jeans. They are not always reliable guides. Their influence has been considerable upon the reading public, upon theologians and upon preachers; they have even misled philosophers who should have known better. Accordingly, it has seemed to me to be worth while to examine in some detail the philosophical views that they have put forth and to criticize the grounds upon which these views are based.

Aha! A Two Volume Collection Martin Gardner, 2006-12-14 A collection of puzzles that challenge reasoning power and intuition and help develop problem-solving ability.

*When You Were a Tadpole and I Was a Fish* Martin Gardner, 2009-10-13 Martin Gardner is indispensable. Here is the perfect introduction to the range of his obsessions from Ann Coulter to The Wizard of Oz. William Poundstone, bestselling author of *Are You Smart Enough to Work at Google*. Best known as the longtime writer of the *Mathematical Games* column for *Scientific American*, which introduced generations of readers to the joys of recreational mathematics, Martin Gardner has for decades pursued a parallel career as a devastatingly effective debunker of what he once famously dubbed fads and fallacies in the name of science. It is mainly in this latter role that he is onstage in this collection of choice essays. *When You Were a*

Tadpole and I Was a Fish takes aim at a gallery of amusing targets ranging from Ann Coulter's qualifications as an evolutionary biologist to the logical fallacies of precognition and extrasensory perception from Santa Claus to The Wizard of Oz from mutilated chessboards to the little known one poem poet Langdon Smith the original author of this volume's title line The writings assembled here fall naturally into seven broad categories Science Bogus Science Mathematics Logic Literature Religion and Philosophy and Politics Under each heading Gardner displays an awesome level of erudition combined with a wicked sense of humor When you figure out the answer to one of Gardner's puzzles you know you've found something that is indisputably true anywhere anytime For a brief moment the universe makes perfect sense John Tierney The New York Times Smart witty essays on science and culture Carolyn Kellogg Los Angeles Times A more than worthwhile introduction to one of the most underappreciated polymaths of the last fifty years Christopher Vola The Brooklyn Rail
