Matrix Metalloproteinases And Timps:

Matrix Metalloproteinases and TIMPs J. F. Woessner, Jacob Frederick Woessner, Hideaki Nagase, The Kennedy Institute of Rheumatology Hideaki Nagase, 2000 The matrix metalloproteinases MMPs are a large family of enzymes that breakdown different components of the extracellular matrix Their catalytic activity is dependent a metal ion usually zinc This issue of the Protein Profiles covers the sequence information three dimensional structures activation protein substrates specificity requirements inhibition and biological roles of all the currently identified MMPs The action of these enzymes must be carefully regulated One way the cell does this is by releasing inhibitory molecules known as tissue inhibitors of metalloproteinases TIMPs This volume contains information on the sequences three dimensional structures and biological roles of the 4 known classes of TIMP Matrix metalloproteinases will therefore be an invaluable source of data for all researchers interested in MMPs and TIMPs

Matrix Metalloproteinases in Tissue Remodelling and Inflammation

Vincent Lagente, Elisabeth Boichot, 2008-11-07 Matrix metalloproteinases MMPs are proteolytic enzymes believed to be involved in many physiological and pathological processes associated with inflammatory reactions MMP synthesis and functions are regulated by three major mechanisms including transcriptional activation post transcriptional processing and control of activity by tissue inhibitors of metalloproteinases TIMPs Many cell types have been identified as producers of MMPs and TIMPs in a context of inflammatory processes MMPs are involved in numerous inflammatory diseases including respiratory cardiovascular and central nervous system pathologies This volume presents new advances in the involvement of MMPs in various diseases associated with inflammatory processes Moreover the recent development of selective and non selective inhibitors of MMPs provides new insights in the relationship between activation of inflammatory cells and tissue remodelling and advises new therapeutic possibilities for the treatment of inflammatory diseases

Matrix Metalloproteinases In The Central Nervous System Katherine Conant,Paul E Gottschall,2005-07-26 This book presents the reader with an understanding of the role played by matrix metalloproteinases MMPs in the normal and diseased central nervous system CNS These enzymes may be important to brain development and may also contribute to tissue destruction which is observed with inflammatory and degenerative conditions of the brain The book provides a background on the biology of MMPs and on the stimuli and conditions that are linked to an increase in their production and activity It describes the targets of MMPs which include matrix proteins such as collagen soluble cytokines and chemokines and cell surface receptors Studies implicating MMPs in neuronal process outgrowth and cell migration in CNS development are covered The book also touches on studies suggesting that in certain situations dysregulated MMP activity and or production may be critical to blood brain barrier breakdown and neuronal damage a

Matrix Metalloproteinases In Health And Disease: Sculpting The Human Body Constance E Brinckerhoff,2017-05-05 The biochemistry and cell biology of Matrix Metalloproteinases MMPs are not necessarily straightforward but basic information on the history of these enzymes their various functions that extend far beyond the cleaving of the extracellular matrix and the complex mechanisms that control their expression are valuable to both scientists and clinicians This volume summarizes the salient features and functions of MMPs and applies this information in a practical manner in order to understand how they contribute to normal physiology and pathology of selected diseases Chapters by noted clinicians Jean Michel Dayer MD in rheumatology Jian Cao MD in oncology and Peter Libby MD in cardiology represent important practical and clinically oriented contributions

MMPs are a family of proteolytic zinc containing enzymes involved in physiological as well as in pathological processes in the human organism. MMPs play a key role in the remodeling of the extracellular matrix. Such a process may occur because of tissue homeostasis, morphogenesis and tissue repair. However, remodeling could also be a part of many pathological states such as arthritis, cardiovascular diseases, neurodegenerative diseases or impaired development in congenital anomalies. This book overviews the role of MMPs in different pathologies affecting the human body.

Microvascular Research: Biology and Pathology, Two-Volume Set David Shepro, 2005-11-03. The microvasculature refers to the smallest blood vessels, arterial and venous, that nurture the tissues of each organ. Apart from transport, they also contribute to the systematic regulation of the body. In everyday terminology, the microcirculation is where the action is. Microcirculation is directly involved in such disease states as Alzheimer's, inflammation, tumor growth, diabetic retinopathy, and wound healing. Plus, cardiovascular fitness is directly related to the formation of new capillaries in large muscles. Microvascular Research is the first book devoted exclusively to this vital systemic component of the cardiovascular system and provides up-to-date mini reviews of normal functions and clinical states. The contributing authors are senior scientists with international reputation in their given disciplines. This two-volume set is a broad interdisciplinary work that encompasses basic research and clinical applications equally. Broad coverage of both basic and clinical aspects of microvasculature research. Contains 167 chapters from over 300 international authors. Each chapter includes key figures and annotated references.
