New Technologies And The Firm Innovation And Competition:

New Technologies and the Firm Peter Swann, 2018-04-09 Originally published in 1993 this book presents the findings of 14 teams involved in a research initiative to examine the initiation and response to innovation in firms. It draws together the many strands which were discovered to influence the successful generation and adoption of new technologies. The core issues in technology management are looked at including skills and expertise, markets and marketing, finance and the issue of technology collaboration both on a domestic and international basis. Technology is shown to be at the very heart of corporate strategy and policy formation. Innovation and Commercialization of Emerging Technologies, 1995 Technological innovation is essential to the future well being of the United States. The ability of the nation to sustain economic growth, increase its standard of living and improve human health and the environment depends in many ways on its success in developing and commercializing new products, processes and services. The growing capabilities of competitors in Europe, Asia and elsewhere around the world increasingly challenge the ability of U.S. firms to convert the nation's science and technology base into a competitive advantage. Such concerns have prompted much debate about the proper role of government in encouraging innovation and the commercialization of new technologies. To date, however, the debate has been hampered by an incomplete understanding of the ways in which firms develop and market new products, processes and services and the barriers they must overcome in the process. *Schumpeterian Perspectives on Innovation, Competition and Growth* Uwe Cantner, Jean-Luc Gaffard, Lionel Nesta, 2009-07-25 Recent developments in economics have gone from the recognition of the importance of innovation for growth and the exploration of innovation mechanisms to the incorporation of the results of the previous research into economic models. An important lesson to be drawn from all this research is that a purely macro-based analysis of growth is not enough. The various mechanisms of innovation creation and diffusion, the importance of agent heterogeneity of market selection processes, the internal organization of the firm and of organizational routines and the obsolescence and the consequent emergence of new types of capital goods are a few examples of micro-economic phenomena that contribute decisively to macro-economic development. The papers in this volume approach those issues from a Schumpeterian point of view and tackle issues like the growing importance of knowledge and human capital, increasing returns and path dependence, the role of variety in economic growth, competition and industry evolution. **Financial Strategies in Competitive Markets** Hasan Dinçer, Serhat Yüksel, 2021-04-13 As globalization continues to rapidly evolve, economic borders between countries have practically disappeared. One effect is that nowadays companies can access new markets by investing in other countries. This offers an important advantage, especially for international and large-scale companies. However, one result is the increased market competition. Small-scale local firms and SMEs have to compete with international firms and corporations that have significantly more resources. This competitive environment jeopardizes the sustainability of the smaller companies which often are driven out of business by the more powerful global players. This book

discusses financial strategies for small and middle size companies to increase their competitiveness in the global markets

Shanley, Scott J. Schaefer, 2018 Control and Game-Theoretic Models of the Environment Jerzy Filar, Carlo Carraro, 2012-12-06 This book

collects some recent works on the application of dynamic game and control theory to the analysis of environmental problems. This collection of papers is not the outcome of a conference or of a workshop. It is rather the result of a careful screening from among a number of contributions that we have solicited across the world. In particular, we have been able to attract the work of some of the most prominent scholars in the field of dynamic analyses of the environment. Engineers, mathematicians, and economists provide their views and analytical tools to better interpret the interactions between economic and environmental phenomena, thus achieving through this interdisciplinary effort new and interesting results. The goal of the book is more normative than descriptive. All papers include careful modelling of the dynamics of the main variables involved in the game between nature and economic agents and among economic agents themselves as well described in Vrieze's introductory chapter. Furthermore, all papers use this careful modelling framework to provide policy prescriptions to the public agencies authorized to regulate emission dynamics. Several diverse problems are addressed from global issues such as the greenhouse effect or deforestation to international ones such as the management of fisheries to local ones, for example, the control of effluent discharges. Moreover, pollution problems are not the only concern of this book.
