maintenance of transportation systems The U S transportation system was designed and built for local weather and climate conditions predicated on historical temperature and precipitation data The report finds that climate predictions used by transportation planners and engineers may no longer be reliable however in the face of new weather and climate extremes Infrastructure pushed beyond the range for which it was designed can become stressed and fail as seen with loss of the U S 90 Bridge in New Orleans after Hurricane Katrina      Societal Responses To Regional Climatic Change Michael H Glantz,2019-07-11 This volume is an outgrowth of a project undertaken by the Environmental and Societal Impacts Group ESIG for the U S Environmental Protection Agency s Office of Policy Analysis to identify societal responses to extreme climate related events in North America
