Predictably Dependable Computing Systems Brian Randell, Jean-Claude Laprie, Hermann Kopetz, Bev Littlewood, 2013-11-11 **Dependable Computing for Critical Applications 3** Carl E. Landwehr, Brian Randell, Luca Simoncini, 2013-06-29 This volume contains the papers presented at the Third IFIP International Working Conference on Dependable Computing for Critical Applications sponsored by IFIP Working Group 10.4 and held in Mondello Sicily Italy on September 14-16 1992. System developers increasingly apply computers where they can affect the safety and security of people and equipment. The Third IFIP International Working Conference on Dependable Computing for Critical Applications like its predecessors addressed various aspects of computer system dependability: a broad term defined as the degree of trust that may justifiably be placed in a system's reliability, availability, safety, security, and performance. Because the scope of the conference was so broad, we hope the presentations and discussions will contribute to the integration of these concepts so that future computer-based systems will indeed be more dependable. The Program Committee selected 18 papers for presentation from a total of 74 submissions at a May meeting in Newcastle upon Tyne UK. The resulting program represented a broad spectrum of interests with papers from universities, corporations, and government agencies in eight countries. Much diligent work by the Program Committee and the quality of reviews from more than a hundred external referees from around the world for which we are most grateful significantly eased the production of this technical program.

Responsive Computer Systems Hermann Kopetz, Yoshiaki Kakuda, 2012-12-06 For the second time the International Workshop on Responsive Computer Systems has brought together a group of international experts from the fields of real-time computing, distributed computing, and fault-tolerant systems. The two-day workshop met at the splendid facilities at the KDD Research and Development Laboratories at Kamifukuoka Saitama in Japan on October 1 and 2 1992. The program included a keynote address, a panel discussion, and in addition to the opening and closing session, six sessions of submitted presentations. The keynote address, "The Concepts and Technologies of Dependable and Real-time Computer Systems for Shinkansen Train Control," covered the architecture of the computer control system behind a very responsive, i.e., timely and reliable transport system, the Shinkansen Train. It has been fascinating to listen to the operational experience with a large fault-tolerant computer application. What are the Key Paradigms in the Integration of Timeliness and Reliability was the topic of the lively panel discussion. Once again, the pros and cons of the time-triggered versus the event-triggered paradigm in the design of real-time systems were discussed. The eighteen submitted presentations covered diverse topics about important issues in the design of responsive systems, and a session on progress reports about leading-edge research projects. Lively discussions characterized both days of the meeting. This volume contains the revised presentations that incorporate some of the discussions that occurred during the meeting. **Fundamentals of Computation Theory** Horst Reichel, 1995-08-16 This book presents the proceedings of the 10th International Conference on Fundamentals of Computation Theory (FCT 95).

held in Dresden Germany in August 1995 The volume contains five invited lectures and 32 revised papers carefully selected for presentation at FCT 95 A broad spectrum of theoretical computer science is covered among topics addressed are algorithms and data structures automata and formal languages categories and types computability and complexity computational logics computational geometry systems specification learning theory parallelism and concurrency rewriting and high level replacement systems and semantics
