Rethinking Scientific Literacy Standards Daniel R. Dunlap, 1995 **Philosophy of STEM Education** Nataly Z. Chesky, Mark R. Wolfmeyer, 2015-07-30 Winner of the American Educational Studies Association AESA Critics Choice Book Award for 2016 Philosophy of STEM Education uses philosophical methods to investigate STEM education s purpose and assumptions It details the why axiology the how epistemology and the what ontology of STEM by drawing upon a variety of philosophies of education science mathematics and technology

Unsettling Responsibility in Science Education Marc Higgins, 2020-11-19 This open access book engages with the response ability of science education to Indigenous ways of living with Nature Higgins deconstructs the ways in which the structures of science education its concepts categories policies and practices contribute to the exclusion or problematic inclusion of Indigenous science while also shaping its ability respond Herein he undertakes an unsettling homework to address the ways in which settler colonial logics linger and lurk within sedimented and stratified knowledge practices turning the gaze back onto science education This homework critically inhabits culture theory ontology and history as they relate to the multicultural science education debate a central curricular location that acts as both a potential entry point and problematic gatekeeping device in order to re open the space of responsiveness towards Indigenous ways of knowing in being

Towards a Convergence Between Science and Environmental Education Justin Dillon, 2016-10-14 In the World Library of Educationalists international scholars themselves compile career long collections of what they judge to be their finest pieces extracts from books key articles salient research findings major theoretical and practical contributions so the world can read them in a single manageable volume Readers thus are able to follow the themes and strands of their work and see their contribution to the development of a field as well as the development of the field itself Internationally recognized for his research on environmental education science engagement learning outside the classroom and teacher identity and development in this volume Justin Dillon brings together a thoughtfully crafted selection of his writing representing key aspects of his life and work leading to his current thinking on the need for a convergence of science and environmental education The chapters are organized around 7 themes On Habitus On methodological issues Developing theories of learning identity and culture Challenges and opportunities science the environment and the outdoors Classroom issues the emergence

of Science Environment Health Science engagement and communication Science environment and sustainability **The World of Science Education**, 2019-02-11 Each volume in the 7 volume series The World of Science Education reviews research in a key region of the world These regions include North America South and Latin America Asia Australia and New Zealand Europe and Israel North Africa and the Middle East and Sub Saharan Africa The focus of this Handbook is on North American Canada US science education and the scholarship that most closely supports this program The reviews of the research situate what has been accomplished within a given field in North American rather than international context The purpose therefore is to articulate and exhibit regional networks and trends that produced specific forms of science education The thrust lies in identifying the roots of research programs and sketching trajectories focusing the changing face of problems and solutions within regional contexts The approach allows readers review what has been done and accomplished what is missing and what might be done next Controversy in Science Museums Erminia Pedretti, Ana Maria Navas Iannini, 2020-04-30 Controversy in Science Museums focuses on exhibitions that approach sensitive or controversial topics With a keen sense of past and current practices Pedretti and Navas Iannini examine and re imagine how museums and science centres can create exhibitions that embrace criticality and visitor agency Drawing on international case studies and voices from visitors and museum professionals as well as theoretical insights about scientific literacy and science communication the authors explore the textured notion of controversy and the challenges and opportunities practitioners may encounter as they plan for and develop controversial science exhibitions They assert that science museums can no longer serve as mere repositories for objects or sites for transmitting facts but that they should also become spaces for conversations that are inclusive critical and socially responsible Controversy in Science Museums provides an invaluable resource for museum professionals who are interested in creating and hosting controversial exhibitions and for scholars and students working in the fields of museum studies science communication and social studies of science Anyone wishing to engage in an examination and critique of the changing roles of science museums will find this book relevant timely and thought provoking **The Re-emergence of Values in Science Education** Deborah Corrigan, Justin Dillon, Richard Gunstone, 2007 Issues relating to values have always had a place in the school science curriculum Sometimes this has been only in terms of the inclusion of topics such as the nature of science and or scientific method and or particular intentions for laboratory work that relate to scientific method sometimes it has been much broader for example in curricula with STS emphases Of importance to aspects of this proposal is that different countries cultures have had different traditions in terms of the place of values in the school science curriculum One obvious very broad difference of this form is the central place in science education thinking in many European countries of *bildung* and the complete absence of this construct from most science curriculum thinking in English speaking contexts There are numbers of such country cultural differences In the 1990s many countries moved towards various conceptualizations of Outcomes Based Education OBE sometimes so labelled

and sometimes not. It was usual but not universal for OBE focused science curricula to have constrained views of the values that should be implicit and explicit in curriculum that is views concerned only with the nature of science and scientific method both usually seen as quite unproblematic. Currently there are a number of education systems that are changing again and choosing to move away from Outcomes Based Education for example South Africa and several Australian states. One of the most interesting features of many of these movements is the re embracing of a wider view of the science curriculum including a reconsideration of the nature and place of the values associated with science in the purposes for and approaches to science education.
