Retinal Pigment Epithelium Function And Disease:

The Retinal Pigment Epithelium Michael F. Marmor, Thomas J. Wolfensberger, 1998 The retinal pigment epithelium is a critical tissue within the eye It lies directly behind the retina where it provides metabolic support to the photoreceptors and controls their local environment As a result the RPE is vital to retinal function but also a site of aging and disease that cause dysfunction and visual loss This book brings together comprehensive reviews of basic and clinical science concerning the RPE It is organized to juxtapose chapters on RPE disease with chapters on the underlying pathophysiology These include up to date accounts of growth factors laser effects proliferative vitreoretinopathy Bruch s membrane pathology as well as new diagnostic tools such as ocular coherence tomography in vivo imaging of lipofuscin and non photic electrical responses Other chapters cover pharmacology and toxicology mechanisms of retinal adhesion and detachment RPE pigments and transport congenital and dystrophic diseases animal models of RPE disease and different aspects of age related macular degeneration The history and evolutionary aspects of the RPE are also presented The contributing authors are experienced clinicians and eminent basic scientists who work on this critical part of the eye The book will be a valuable resource for anyone interested in the eye and a necessity for specialists in the fields of retinal physiology and retinal disease **Retinal Pigment**

Epithelium in Health and Disease Alexa Karina Klettner, Stefan Dithmar, 2020-01-01 This book provides a contemporary resource on one of the major players in retinal diseases the Retinal Pigment Epithelium RPE Throughout the book the physiological and the pathological function of the RPE are covered on equal terms to help readers to understand the RPE as a whole Moreover the development of RPE in diagnostics and therapy are covered as well as some practical knowledge about RPE experimental models *Retinal Pigment Epithelium in Health and Disease* highlights new findings of RPE research and includes the state of the art knowledge of each RPE topic presented This important feature sets this book apart from other publications with the chapters following a design which leads from the general to the specific to give a precise collection of the facts known The chapters are written by well known experts that are currently active in the field as consultants basic scientists and group leaders providing expert guidance on the current aspects and future outlooks of this topic *Retinal Pigment Epithelium and Macular Diseases* Gabriel Coscas, Felice Cardillo Piccolino, 2012-12-06 This volume of Documenta Ophthalmologica Proceedings Series collects the scientific papers presented at the 2nd International Symposium on Retinal Pigment Epithelium and the 4th Meeting of the European Macula Group held in Genoa May 29 June 1 1996 The Symposium on Retinal Pigment Epithelium was promoted by the University Eye Clinic of Genoa as the natural continuation of the first Symposium held with great success in Genoa in 1988 The previous Meetings of the European Macula Group were held in Coimbra 1988 Crete 1989 and Athens 1994 I was greatly pleased and honoured to host the fourth congress of this distinguished Society and I am grateful to Gabriel Coscas Jose Cunha Vaz and George Theodossiadis found ers of the Society for selecting Genoa on this occasion The two meetings integrated well in an unicuum and brought together an exceptional

number of outstanding retinal specialists coming from all over the world All the aspects of the current research concerning retinal pigment epithelial and macular diseases were covered Several interesting presentations regarded new techniques of retinal and choroidal imaging A full session was dedicated to the latest advances in culture and transplantation of retinal pigment epithelial cells Age related macular degeneration was a major subject for discussion including new approaches to treatment This topic was high lighted by a mini symposium on drusen including a series of superb lectures on classification clinicopathological studies indocyanine green imaging and laser treatment for prevention of choroidal neovascularization

Neuroprotection and Neuroregeneration for Retinal Diseases Toru Nakazawa,Yasushi Kitaoka,Takayuki Harada,2014-07-23 This book provides the latest findings on neuroprotection and neuroregeneration as potential therapeutic strategies for various eye diseases namely glaucoma age related macular degeneration AMD retinal detachment and retinitis pigmentosa Glaucoma is one of the main causes of blindness throughout the world and other diseases such as AMD and retinitis pigmentosa also lead to loss of vision All these conditions are characterized by degeneration of specific retinal cell types making it essential to establish treatments to protect retinal neurons and the optic nerve With that aim in mind this book explains the mechanisms underlying aforementioned diseases and their experimental models The novel strategy proposals for the treatment of retinal diseases based on the concept of neuroprotection are also discussed in the main body of the text while the section on regenerative research discusses optic nerve regeneration endothelial progenitor cells and iPS cells This book is recommended as a professional reference work for all doctors and trainees in the field of ophthalmology who are interested in neuroprotective and neuroregenerative treatments

Neuroglia: Function and Pathology Alexei Verkhratsky,Arthur Butt,2023-05-12 Diverse specialised neuroglial cells guarantee the development preservation and health of the central nervous system the peripheral nervous system the enteric nervous system and the special senses In the central nervous system it is the astrocytes oligodendrocytes and microglia that safeguard nerve cell function and integrity that controls all behaviours and encompasses the cerebral cortex of the brain which is the root of humanity In the peripheral nervous system Schwann cells play the leading role together with satellite glial cells of the sensory and autonomic ganglia ensuring correct communication between the organs and tissues with the brain and the spinal cord In the enteric nervous system specialised enteric glial cells maintain all aspects of gastrointestinal function Then there are distinctive glial cells of the special senses that ensure how the body perceives and reacts to its environment In pathology neuroglia strive to protect the diverse cellular components of the nervous system and are responsible for a proactive programme of posttraumatic restructuring that is aimed at recovery of life sustaining function Neuroglia Function and Pathology provides a highly original and comprehensive account of the physiology and pathophysiology of glial cells in the central and peripheral nervous systems The first part of the book provides a far reaching description of glial cell form and function from their evolution in invertebrates to their complexity in humans encompassing the developmental origin of the varied glial cell types and their

diversity of morphology molecular biology and cellular physiology The second part of the book is devoted to an all embracing evaluation of glial cell pathophysiology commencing with definitive explanations of the fundamental pathologies of the main glial cell types and ending in a systematic examination of glial contributions to specific neurological diseases This book emphasises the central roles played by the different classes of neuroglial cells in the progression and outcome of neurological disorders of the central and peripheral nervous systems and highlights potential of glial cells as therapeutic targets The book contains more than 2500 key references from over 150 years of glial research and is superbly illustrated with over 350 original and explanatory full colour figures that describe the diverse characteristics and properties of glial cells in health and disease Under the same cover this book combines an authoritative reference book for research and clinical neuroscientists and at the same time serves as an instructive textbook for students of neuroscience from undergraduates to postgraduates Single volume covering key aspects of glial cell physiology and pathology In depth overview of the history of glial cell research Comprehensive review of glial cell physiology and pathology Authoritative special chapters on the major neurological diseases Full colour throughout with 360 illustrations

Vitreoretinal Disease Indgrid U. Scott, Carl D. Regillo, Harry W. Flynn, Jr., 2017-12-18 The management of major vitreoretinal diseases has changed dramatically since publication of the first edition in 1999 The field continues to evolve rapidly and is becoming an increasingly complex multifaceted practice of medicine and surgery As such retinal specialists are faced with increasingly sophisticated diagnostic and therapeutic modalities to learn and master Contributors to this completely updated reference are renowned experts in retinal disease and vitreous disorders Divided into four essential sections the book starts with a basic overview of posterior segment anatomy and physiology The second section reviews the spectrum of diagnostic tools used in the field from relatively low technology such as the indirect ophthalmoscope to the latest state of the art optical coherence tomography test The third and most comprehensive section covers disease states subdivided into eight categories retinovascular conditions macular diseases inherited vitreoretinal conditions inflammatory conditions intraocular tumors vitreous and retinal detachments trauma and toxicity and fundus conditions The text concludes with specific vitreoretinal procedures Key Features New technologies including spectral domain optical coherence tomography OCT intravitreal injections and microincisional vitrectomy The utilization of multifocal electroretinography scanning laser ophthalmoscopy and fundus autofluorescence Advances in treatment of macular edema and age related macular degeneration with anti VEGF therapy Summaries of the latest and most important clinical trials Richly illustrated with more than 700 color state of the art retinal images and surgical procedure drawings Clinical pearls controversies and special considerations highlighted in color boxes in every chapter This up to date clinically oriented resource will greatly benefit ophthalmology residents and ophthalmologists with comprehensive practices

Ocular Transporters in Ophthalmic Diseases and Drug Delivery Joyce Tombran-Tink, Colin J. Barnstable, 2008-04-09 Detection and responses to light are common features found throughout the plant and animal

kingdoms In most primitive life forms a patch of light sensitive cells make up a region containing a cell sheet devoid of any specialized anatomical structure With the development of the eyes in more advanced life forms light sensing structures became more complex but primitive eyes are still in contiguity with other body tissues and fluids The evolution of the eyeball promoted an increase in visual acuity and visual processing that in turn allowed vision to become the dominant sensory system for many species including humans The formation of a totally enclosed structure however required a unique set of solutions to enable the eye to control its environment Like most organs the eye evolved a series of homeostatic mechanisms to regulate its environment within tightly controlled limits Unlike most organs however this advanced light sensing structure has a series of requirements that place a tremendous burden on molecules that are responsible for controlling ocular homeostasis There are many signaling molecules and pathways that work in parallel or through crosstalk to maintain the normal ocular environment required for visual function Perhaps none are so critical as the group of membrane molecules that are collectively termed transporters These molecules are responsible for the controlled and selective movements of ions nutrients and fluid across various ocular layers necessary to optimize the internal milieu to preserve visual function
