Retinoids In Oncology:

Retinoids in Oncology Waun Ki Hong, Reuben Lotan, 1993-05-11 This reference provides a comprehensive overview of recent developments in basic research that are relevant to the application of retinoids for cancer prevention and treatment. Organized in a quick referral format by specific disease site, this book describes the effects of retinoids on squamous differentiation in normal pre-malignant and malignant epithelial tissues, addresses the mechanisms by which cultured keratinocytes respond to retinoids, considers the antitumor activity of combination therapy with retinoids and cytokines, reviews the toxicity profiles of the vitamin A molecule and the synthetically derived retinoid compounds and their effects on humans, examines the use of retinoids in the prevention of basal cell carcinoma and squamous cell carcinoma (SCC) and in the therapy of advanced SCC, and summarizes data on the potential of retinoids to prevent epithelial cancer, to act as adjuvants to current therapies in early stages of the disease, and to aid in the management of both solid tumours and hematologic malignancies. A guide for the many disciplines involved in the preclinical studies and direct care of cancer patients, this book serves as useful reading for clinical surgical and radiation oncologists, clinical immunologists, dermatologists, obstetricians, gynaecologists, haematologists, otolaryngologists, internists, nutritionists, and pulmonary disease specialists. **Retinoids in Oncology** Laurent Degos, David R. Parkinson, 1995-01-01 Recent developments with respect to the biology and clinical use of retinoids in cancer therapy and prevention are comprehensively covered by experts in this new field. Newer aspects of molecular mechanisms of retinoid effects, the cellular biology, and the developmental effects of these compounds are presented together with a comprehensive description of the latest findings of retinoid pharmacology, toxicology, and clinical effects in a wide range of hematological and solid malignancies. **Retinoids in Oncology** Waun Ki Hong, Reuben Lotan, 2020-07-24 This reference provides a comprehensive overview of recent developments in basic research that are relevant to the application of retinoids for cancer prevention and treatment. Organization, International Agency for Research on Cancer, 1999 The retinoids are a class of compounds structurally related to Vitamin A In the last 30 years more than 2 500 retinoids have been synthesized and biologically tested with the objective of identifying those with an enhanced therapeutic ratio The majority have been studied for their cancer preventive activity in experimental models and some in clinical trials in humans On 24 30 March 1999 a working group of international experts met in Lyon to consider the existing evidence on the cancer preventive activity of nine retinoids judged to have sufficient human and or animal data to permit evaluation This handbook details the evidence considered and summarizes the evaluation made by the working group **Retinoids as Anti-cancer Agents in Breast Cancer** Manzoor Ahmad

Mir, 2025-08-05 Retinoids as Anti cancer Agents in Breast Cancer A New Hope for Breast Cancer Treatment offers a comprehensive overview of the latest research and advancements in using retinoids to treat breast cancer The book delves into novel approaches including drug combinations and the development of new pharmaceuticals It provides an in depth analysis of current treatment methods highlighting both challenges and opportunities in the field Topics covered include the principles and mechanisms of retinoids as anti cancer agents preclinical and clinical studies and advancements in drug delivery systems and nano formulations Future research directions are also explored emphasizing new drug combinations biomarkers for patient selection and personalized treatment strategies This book will serve as a platform for students researchers oncologists pharmacologists and healthcare professionals who want to understand the potential of retinoids in clinical practice Provides insights into the need for using cutting edge technology to develop novel pharmaceutical agents based on bioactive natural compounds for the efficient cancer treatment of breast cancer Captures new research and knowledge to fully understand and potentially optimize the use of retinoids in breast cancer treatment Evaluates the potential of retinoids in breast cancer treatment as novel alternatives to mainstream breast cancer therapy **Retinoids:**

Their Physiological Function and Therapeutic Potential G.V. Sherbet, 1997-10-30 Retinoids have received considerable attention in recent years and due cognizance has been given to their versatility as biological response modifiers as evidenced by the virtually explosive growth of literature in this field in the past few years This volume has been designed to give a current state of the art picture of retinoids The perceived potential of retinoids in the treatment of certain disease states has initiated attempts at identifying and synthesizing new retinoid derivatives with definable and selective effects on aberrant biological phenomena Appropriately therefore we begin with the chemistry of retinoids and their derivatives together with

discussions of their biological activity Major advances have been made in understanding the mechanisms by which retinoids modulate physiological and phenotypic traits of cells The transduction of retinoid signaling by the mediation of nuclear receptors of the steroid thyroid receptor superfamily has now been studied extensively and the cloning and defining the characteristics of these receptors has been a focus of discussion in this volume Retinoids also markedly modulate the transduction of extracellular signals such as those imparted by growth factors and hormones and thus actively influence and control cellular proliferative patterns Retinoids can alter epidermal growth factor receptor expression Kawaguchi et al 1994 responsiveness to thyroid hormone Esfandiari et al 1994 Pallet et al 1994 inhibit the proliferative responses of hematopoietic progenitor cells to granulocyte colony stimulating factor Smeland et al 1994 and modulate secretion on interleukins by leukaemic cells Balitrand et al 1994 among other things This has obvious implications for pharmacological manipulation of deregulated growth Dickens and Colletta 1993 Mulshine et al 1993 Apoptosis is another component in the regulation of growth control Apoptotic cell death is influenced by several agents and retinoids may function by interfering with apoptotic pathways of regulation of growth control and quite legitimately therefore the importance of this aspect of retinoid function has been duly recognized here *Chemistry and Biology of Synthetic Retinoids* Marcia I. Dawson, 2018-01-18 The purpose of this book is to present an overview of advances in both retinal and retinoic acid synthetic chemistry and biology Chapters are written by research workers who are active in these fields Emphasis is placed on structure activity relationships It includes topics of cell differentiation maintenance of cell morphology and vision This reference contains a special section on assays which were developed to measure retinoid activity This book is ideal for those interested in the fields of photobiology organic chemistry biological chemistry and nutrition *Retinoids: New Trends in Research and Therapy* J. -H.

Saurat, 1985-05-08 **Retinoids: From Basic Science to Clinical Applications** M.A. Livrea, G. Vidali, 1994-05-26 Basic investigators as well as clinicians will find this volume valuable both as a summary of recent research and as a stimulus for future experimental work in this continuously expanding field **Cancer Chemotherapy and Selective Drug**

Development K.R. Harrap, W. Davis, A.H. Calvert, 2012-12-06 Over the past 30 years many significant advances have been made in the management of a number of disseminated malignant diseases The prognosis for diseases such as childhood leukaemia choriocarcinoma and Hodgkin's disease has gradually been transformed as better anti tumour agents have become available and their clinical use has been refined During the past 10 years the advent of new agents particularly cisplatin bleomycin and the podophyllotoxins has allowed the cure of disseminated testicular tumours This degree of success has not however been achieved in the case of a number of other common cancers Ovarian carcinoma is tantalisingly chemo sensitive and although there are long term survivors from disseminated disease these are only a small proportion of the total Breast cancer although sensitive to a multitude of drugs appears to have yielded neither survival benefit nor cure to the efforts of therapists while tumours such as those of the colon remain stubbornly unresponsive Against this backdrop it is

apparent that additional more selective treatments are needed if further impact is to be made on the problem of cancer The development of such agents requires the integration of a multidisciplinary effort encompassing the fields of chemistry biology and medicine This symposium provided a forum for clinical and preclinical sScientists where current aspects of cancer treatment were reviewed and approaches to the development of a new generation of more selective anticancer drugs discussed **Journal of the National Cancer Institute** ,2005 **Research Awards Index** ,1982 Biomedical Index to PHS-supported Research ,1992 **Cancer Treatment Reports** ,1987 **Subject Index of Extramural Research Administered by the National Cancer Institute** ,1978 Current information about research grants and contracts supported by the National Cancer Institute Subject listing gives contract or grant number and topic Investigator grant number and contract number indexes Hormones and Vitamins in Cancer Treatment Aurel Lupulescu,1990-10-24 Hormones and Vitamins in Cancer Treatment is intended to serve as a therapeutical guide for physicians using non aggressive methods such as hormoneotherapy and vitamin therapy when treating cancer patients This book provides the rationale and scientific basis for hormones and vitamins which play an important role in cancer management and emphasizes the significance of hormones and vitamins in chemoprevention and chemoprophylaxis of cancer Topics discussed in this book include the criteria for selecting patients for hormoneotherapy and vitamin therapy the favorable effects and advantages of hormoneotherapy and vitamin therapy over or used as adjuvant therapeutic agents more aggressive methods such as chemotherapy radiation therapy immunotherapy or surgery and hormone like substances such as growth factors interferons interleukins and prostoglandins Also included is the newest information regarding the role of diet in cancer prevention This book is packed with valuable information for researchers physicians and students of endrocrinology and clinical oncology It is also the only book of its kind that discusses the role of hormones hormone like substances and vitamins in cancer prevention and treatment **Subject Index of Current Extramural Research Administered by the National Cancer Institute** ,1978 **International Cancer Congress** ,1986-08-22 **Current Opinion in Oncology** ,1998
