alike **Fluorescence Spectroscopy** ,2011-09-06 Fluorescence spectroscopy is a type of electromagnetic spectroscopy using a beam of light which analyzes fluorescence from a sample Given its extremely high sensitivity and selectivity it is an important investigational tool in many areas including material sciences analytical sciences and across a broad range of chemical biochemical and medical research It has become an essential investigational technique allowing detailed real time observation of the structure and dynamics of intact biological systems The pharmaceutical industry uses it heavily and it has become a dominating technique in biochemistry and molecular genetics Keeps MIE buyers and online subscribers up to date with the latest research with this highly used technique Provides tried and tested techniques which eliminate searching through many different sources **Angiogenesis: In Vitro Systems** David A. Cheresch,2011-09-02 Angiogenesis is the growth of new blood vessels and is an important natural process in the body A healthy body maintains a perfect balance of angiogenesis modulators In many serious disease states however the body loses control over angiogenesis Diseases that are angiogenesis dependent result when blood vessels either grow excessively or insufficiently Tried and tested techniques written by researchers that developed them used them and brought them to fruition Provides the builder s manual for essential techniques a one stop shop that eliminates needless searching among untested techniques Includes step by step methods for understanding the cell and molecular basis of wound healing vascular integrin signaling mechanical signaling in blood vessels and vascular proteomics *Biology of Serpins* James Whisstock,Phillip Bird,2011-07-18 Serpins are a group of proteins with similar structures that were first identified as a set of proteins able to inhibit proteases The acronym serpin was originally coined because many serpins inhibit chymotrypsin like serine proteases This volume of Methods in Ezymology is split into 2 parts and comprehensively covers the subject **RNA Turnover in Bacteria, Archaea and Organelles** Lynne E. Maquat,Cecilia Arraiano,2008-12-23 Specific complexes of protein and RNA carry out many essential biological functions including RNA processing RNA turnover RNA folding as well as the translation of genetic information from mRNA into protein sequences Messenger RNA mRNA decay is now emerging as an important control point and a major contributor to gene expression Continuing identification of the protein factors and cofactors and mRNA instability elements responsible for mRNA decay allow researchers to build a comprehensive picture of the highly orchestrated processes involved in mRNA decay and its regulation Covers the difference in processing of mRNA between eukaryotes bacteria and archea Benefit Processing of mRNA differs greatly between eukaryotes bacteria and archea and this affords researchers readily reproducible techniques to understand and study the molecular pathogenesis of disease Expert researchers introduce the most advanced technologies and techniques to identify mRNA processing transport localization and turnover which are central to the process of gene expression Benefit Keeps MIE buyers and online subscribers up to date with the latest research Offers step by step lab instructions including necessary equipment and reagents Benefit Provides tried and tested techniques which eliminate searching through many different sources Tested techniques are trustworthy and avoid pitfalls so
