Haghighi, 2007-08-31 This book offers the first comprehensive assessment of the various internal and external measures undertaken by the European Union to guarantee security of oil and gas supply It sets out and analyses in a coherent and thorough manner those aspects of EU external policy that are relevant in establishing a framework for guaranteeing energy security for the Union What makes the book unique is that it is the first of its kind to bridge the gap between EU energy and EU external policy The book discusses EU policy towards the major oil and gas producing countries of Russia the Mediterranean and the Persian Gulf at the bilateral as well as regional and multilateral level It brings together not only the dimensions of trade and investment but also other important aspects of external policy namely development and foreign policy The author argues that the EU's energy

The Making of Europe's Critical Infrastructure P. Högselius, A. Hommels, A. Kaijser, E. van der Vleuten, 2013-11-26 Europe's critical infrastructure is a key concern to policymakers, NGOs, companies and citizens today. A 2006 power line failure in northern Germany closed lights in Portugal in a matter of seconds. Several Russian-Ukrainian gas crises shocked politicians, entrepreneurs and citizens thousands of kilometers away in Germany, France and Italy. This book argues that present-day infrastructure vulnerabilities resulted from choices of infrastructure builders in the past. It inquires which and whose vulnerabilities they perceived, negotiated, prioritized and inscribed in Europe's critical infrastructure. It does not take Europe for granted but actively investigates which countries and peoples were historically connected in joint interdependency and why. In short, this collection unravels the simultaneous historical shaping of infrastructure, common vulnerabilities and Europe.

Putting a Price on Energy, 2007 Governing the Energy Transition Geert Verbong, Derk Loorbach, 2012-03-29 The Energy Transition: the inevitable shift away from cheap, centralized, largely fossil-based energy systems is one of the core challenges of our time. This book provides a coherent and novel insight into the nature of this challenge and possible strategies to accelerate and guide such transitions. It brings together prominent European scholars and practitioners from the fields of energy transition research and governance to draw attention to the current complex dynamics in the energy domain and offer elegant and provocative explanations for current crises and lock-ins. They identify multiple energy transition pathways that emerge and increasingly compete and emphasize the need and possibilities for novel governance. By analysing the complexity of energy transition processes and the difficulties in shifting to sustainable pathways, this text questions the extent to which actually governing energy transitions is already reality, just an illusion or a bare necessity.

The New Energy Paradigm Dieter Helm, 2007-04-26 The New Energy Paradigm provides an overview of the current energy policy debate contextualized by the oil shock from 2000 and considers how the trends in international energy markets impact on security of supply and climate change. It includes a discussion of market design, looks at carbon and oil markets and considers best practice for effective policy design.

Red Gas P. Högselius, 2012-12-28 This book applies a systems and risk perspective on international energy relations. Author Per Högselius investigates how and why governments, businesses, engineers and other actors sought to promote and oppose the establishment of an extensive East-West natural gas regime that seemed to overthrow the fundamental logic of the Cold War.

Dividing Divided States Gregory F. Treverton, 2014-05-21 When nations divide, whether peacefully or through violence, there are many issues beyond politics to negotiate in the aftermath. Understanding the concerns that are likely to confront separated states is vital in establishing stability in new states. Examining case studies in Africa, Europe and Asia, international security expert Gregory Treverton provides a detailed guide to recent national divisions that range from the partition of India to the secession of Eritrea from Ethiopia. *Dividing Divided States* offers an overview of the ways different states have handled such contentious issues as security and citizenship, oil and

water resources assets and liabilities and the rights of pastoralist groups In each case Treverton considers how the root causes of secession such as long simmering conflicts nationalist politics and changed geopolitical circumstances impact the effectiveness of policies that form new nations *Dividing Divided States* serves as both a source of ideas for future secession policies and a reminder that while the motivations and outcomes of secessions may differ widely separating states face similar challenges in dividing populations natural resources and state resources This book offers considered and cautionary lessons for policy makers and policy researchers alike *Energy Policies of IEA Countries*, 2004 *Encyclopedia of Mineral and Energy Policy* Günter Tiess, Tapan Majumder, Peter Cameron, 2023-07-14 This Encyclopedia provides a cutting edge up to date reference source on mineral and energy policies around the world It offers information on GDP population investment scenarios and current environmental regulations in over one hundred thirty countries from 13 geographic regions around the world It covers topics such as geo conservation deep mining technology as well as rare earth green technology and international organizations that are actively involved in minerals and energy through exploration arbitration marketing and investment Topical entries are presented alphabetically with extensive cross referencing to ensure user friendly reading This Encyclopedia presents the work of more than 20 section editors and more than 100 international experts in the fields of mineral and energy policies It is designed as a essential resource for researchers students libraries industry governments and international organizations and presents a wealth of insights and guidance for corporate planning regarding exploration and financial investments as well as for venture capitalist and international funding bodies As such it provides an indispensable point of reference for future research on mineral and energy policy **Lessons from Liberalised Electricity Markets** International Energy Agency, 2005 After a decade or more of experiences in reforming electricity markets in several pioneer regions some important lessons can now be drawn This book gives an assessment of these developments focusing on the issues that are critical for successful electricity market liberalization One lesson is that it is a long process which requires strong on going government involvement and commitment Experiences and examples in the study are mainly drawn from the UK Australian Nordic and North Eastern United States the PJM interconnection markets which have all operated with considerable success for a number of years They have improved efficiency without jeopardizing system security These markets are described in greater detail in annexes of the book but the main analysis focuses on key issues rather than on specific countries and regions or specific market models The study explores different solutions used in those relatively robust markets and the remaining challenges Publisher description *Energy Prices and Taxes*, 2004 *Energy Security and Climate Policy* International Energy Agency, 2007 World energy demand is surging Oil coal and natural gas still meet most global energy needs creating serious implications for the environment One result is that CO₂ emissions the principal cause of global warming are rising This study underlines the close link between efforts to ensure energy security and those to mitigate climate change Decisions on one side affect the other The book presents a framework to assess interactions between

energy security and climate change policies combining qualitative and quantitative analyses The quantitative analysis is based on the development of energy security indicators tracking the evolution of policy concerns linked to energy resource concentration The indicators are applied to a reference scenario and CO₂ policy cases for five case study countries The Czech Republic France Italy the Netherlands and the United Kingdom
