Dormancy and Germination differs from all other books on seed germination It is an all encompassing volume that provides a
working hypothesis of the ecological and environmental conditions under which various kinds of seed dormancy have
developed It also presents information on the seed germination of more than 3500 species of trees shrubs vines and
herbaceous species making this a valuable reference for anyone studying germination This book delivers information on
characteristics of each type of seed dormancy how each type of dormancy is broken in nature and what environmental
conditions are required for germination after dormancy is broken It explains how studies should be done to distinguish
persistent from transient seed banks and covers which species should be controlled propagated and conserved Seeds gives
the reader insight and guidelines for doing ecologically meaningful studies on the biogeography and evolution of seed
