A Toolbox for the Application of the Rules of Targeting Tetyana (Tanya) Krupiy, 2016-02-29 How military commanders interpret the rules of targeting impacts not only on whether civilians and civilian objects are harmed in the course of a military operation but also on the scale of harm that ensues Commentators have queried whether military commanders observed the law even when parties to a conflict acted in accordance with mandates to protect civilians as was the case when a coalition of states bombed targets in Libya in 2011 However limited guidance is publicly available on how military commanders apply these rules on the battlefield In order to allow military commanders to exercise judgment in determining what steps they are required to take to spare civilians in a

specific set of circumstances the rules of targeting are formulated in an open ended fashion which complicates one's ability to evaluate whether a particular military operation complies with the law By examining case studies ranging from Operation Desert Storm in 1991 to Operation Protective Edge in 2014 this book addresses lacunae in current scholarship It puts forward principles which capture how military commanders deliberate while interpreting what the rules of targeting require in particular scenarios International humanitarian law this book contends places a duty on attackers to assume risk in order to mitigate danger to civilians Drawing on the field of psychology this study provides an explanation of how military commanders assess when circumstances do not permit them to inform civilians about a forthcoming attack

Civil-military Relations in Today's China: Swimming in a New Sea David M. Finkelstein, Kristen Gunness, 2015-03-26 This work provides an in depth and up to date examination of civil military relations in China. It reflects the significant changes taking place in Chinese society and their impact on the civil military dynamic with particular attention to how the military will fit in with the new class of entrepreneurs. Rather than focusing exclusively on elite Party Army relations, the book examines civil military relations from various vantage points at the center and in the provinces between civilian leaders and military leaders from a strictly military perspective and from a civilian perspective and from the angle of specific issue areas. Chapters explore issues such as the impact of AIDS, the defense budget, the emerging dynamic between the military and China's new leadership, resettling demobilized troops back into civilian life and the role of the militia reserve units and other civilian groups. The contributors are highly respected specialists in China studies including political scientists, historians, PLA specialists and sociologists. A New Direction for China's Defense Industry Evan S. Medeiros, Roger Cliff, Keith Crane, James C. Mulvenon, 2005-12-19 Since the early 1980s a prominent and consistent conclusion drawn from research on China's defense industrial complex has been that China's defense production capabilities are rife with weaknesses and limitations. This study argues for an alternative approach. From the vantage point of 2005 it is time to shift the focus of current research to the gradual improvements in and the future potential of China's defense industrial complex. The study found that China's defense sectors are designing and producing a wide range of increasingly advanced weapons that in the short term are relevant to a possible conflict over Taiwan but also to China's long term military presence in Asia. Part of a larger RAND Project AIR FORCE study on Chinese military modernization, this study examines the current and future capabilities of China's defense industry. The goals of this study are to 1

China's Military Power Roger

Cliff,2015-09-15 Once termed the world's largest military museum the Chinese military has made enormous progress over the past twenty years. With skyrocketing military budgets and new technology, China's tanks, aircraft, destroyers, and missile capabilities are becoming comparable to those of the United States. If these trends continue, how powerful will the Chinese military be in the future? Will its capabilities soon rival or surpass those of the United States? The most comprehensive study of its kind, this book provides a detailed assessment of China's military capabilities in 2000 and 2010, with projections for 2020. It is the first of its kind in outlining a rigorous, theoretically and empirically grounded framework for assessing military capability based on not just weaponry but also doctrine, training, equipment, and organizational structure. This framework provides not only the most accurate assessment of China's military to date but an important new tool in the study of military history.
