in Complex Analysis Dimitrij Akhiezer,2012-12-06 This book was planned as an introduction to a vast area where many
 contri butions have been made in recent years The choice of material is based on my understanding of the role of Lie groups
 in complex analysis On the one hand they appear as the automorphism groups of certain complex spaces e g bounded
 domains in en or compact spaces and are therefore important as being one of their invariants On the other hand complex Lie
 groups and more generally homoge neous complex manifolds serve as a proving ground where it is often possible to
 accomplish a task and get an explicit answer One good example of this kind is the theory of homogeneous vector bundles
 over flag manifolds Another example is the way the global analytic properties of homogeneous manifolds are translated into
 algebraic language It is my pleasant duty to thank A L Onishchik who first introduced me to the theory of Lie groups more
 than 25 years ago I am greatly indebted to him and to E B Vinberg forthe help and advice they have given me for years I
 would like to express my gratitude to M Brion B Gilligan P Heinzner A Hu kleberry and E Oeljeklaus for valuable discussions
 of various subjects treated here A part of this book was written during my stay at the Ruhr Universitat Bochum in 1993 I
 thank the Deutsche Forschungsgemeinschaft for its research support and the colleagues in Bochum for their hospitality
