Riley, 2008 Medical simulation is a relatively new science that is achieving respectability among healthcare educators worldwide Simulation and skills centres have become established to integrate simulation into mainstream education in all medical nursing and paramedical fields Borrowing from the experience and methodologies of industries that are using simulation medical educators are grappling with the problem of rapidly acquiring the skills and techniques required to implement simulation programmes into established curricula This book assists both novice and experienced workers in the field to learn from established practitioners in medical simulation Simulation has been used to enhance the educational experience in a diverse range of fields therefore a wide variety of disciplines are represented The book begins with a section on the logistics of establishing a simulation and skills centre and the inherent problems with funding equipment staffing and course development and promotion Section two deals with simulators and related training devices that are required to equip a stand alone or institution based centre The features strengths and weaknesses of training devices are presented to help the reader find the appropriate simulator to fulfil their training requirements There is a guide to producing scenarios and medical props that can enhance the training experience The third section covers adult education and it reviews the steps required to develop courses that comply with best practice in medical education Teaching skills facilitating problem based learning groups and debriefing techniques are especially important to multidisciplinary skills centres that find themselves becoming a centre for medical education The manual concludes with guides for the major specialties that use simulation including military paediatrics CPR and medical response teams obstetrics and anaesthesia *Advanced Intelligent Paradigms in Computer Games* Norio Baba, Hisashi Handa, 2007-06-26 The evolution of technologies has greatly changed the basic structure of our industry and nature of our daily lives Industries which did not exist several decades ago have made remarkable progress in recent years and our lives have flourished One of the most typical examples is the computer game industry This book presents a sample of the most recent research concerning the application of computational intelligence techniques and internet technology in computer games This book contains eight chapters The first chapter by N Baba and H Handa is on utilization of evolutionary algorithms to increase excitement of the COMMONS GAME It is shown that the original COMMONS GAME which is one of the most popular environmental games has been made much more exciting by the intelligent utilization of the two evolutionary algorithms The second chapter by H Barber and D Kudenko is on adaptive generation of dilemma based interactive narratives In this chapter they present an interactive narrative generator that can create story lines that

incorporate dilemmas to add dramatic tension They also briefly touch upon the possibility that their work could provide a useful tool for making dramatically interesting game playing possible The third chapter by J Tongelius S M Lucas and R D Nardi is on computational intelligence CI in racing games The authors suggest that CI techniques can be used for various purposes such as controller evolution for the racing and track evolution for a proficient player *A Manual of Community Involvement Techniques for Designing and Implementing Community Involvement in Highway Planning and Design* United States. Simulations of Decision-Making as Active Learning Tools Peter Bursens, Vincent Donche, David Gijbels, Pieter Spooren, 2018-03-05 This volume brings together both political and educational scientists While educational research literature has so far not systematically addressed the tool of simulations of decision making political scientists have hardly used insights from research on assessment or on motivation and interest of students Almost all political science publications on simulations merely discuss how to implement the tool in class and fall short of providing evidence of the effects on student outcomes such as increased interest and performance Combining the two disciplines is mutually enriching Political science benefits from state of the art educational science measuring and testing of the claims made by the proponents of simulations while educational sciences adds the systematic analysis of simulations of decision making to their list of empirical objects which also adds insights to the theories on the affective component of student learning It is the explicit aim of the volume to address how simulating decision making environments fosters learning Implications for research and practice regarding student learning are addressed in all chapters **The Guide to Simulations/Games for Education and Training** Robert E.
