Sven Arvidson,2006-03-12

The phone call came mid afternoon in February of 1996 The program chair for the annual meeting for the Southern Society of Philosophy and Psychology wanted to make sure he had the facts right This is somewhat unusual he began You re a philosophy professor who wants to present to psychologists in the psychology portion of the meeting That s right Well your paper was accepted for that part of the program but the others just wanted me to check and make sure that s where you want to be presenting That s right Reassured the professor wished me luck and said good bye In my session at the meeting I was the last to present As my time approached the medium sized room slowly became crowded I dreamed that these psychologists had left their other meetings early to make sure to catch my presentation on the use of metaphors in attention research As I arose to present I noticed that the half full room had become standing room only Finally after years of feeling as if I was struggling alone in promoting and defending a phenomenology of attention I had an eager audience for my message My persistence had paid off I delivered my message with passion      The Border Between Seeing and Thinking Ned Block,2023

The Border Between Seeing and Thinking explores questions about the relationship of perception and cognition not by appealing to intuitions as is common in philosophy but to empirical evidence including experiments in neuroscience and psychology      **The Unity of Perception**

Susanna Schellenberg,2018-08-22 Perception is our key to the world It plays at least three different roles in our lives It justifies beliefs and provides us with knowledge of our environment It brings about conscious mental states It converts informational input such as light and sound waves into representations of invariant features in our environment Corresponding to these three roles there are at least three fundamental questions that have motivated the study of perception How does perception justify beliefs and yield knowledge of our environment How does perception bring about conscious mental states How does a perceptual system accomplish the feat of converting varying informational input into mental representations of invariant features in our environment This book presents a unified account of the phenomenological and epistemological role of perception that is informed by empirical research So it develops an account of perception that provides an answer to the first two questions while being sensitive to scientific accounts that address the

third question The key idea is that perception is constituted by employing perceptual capacities for example the capacity to discriminate instances of red from instances of blue Perceptual content consciousness and evidence are each analyzed in terms of this basic property of perception Employing perceptual capacities constitutes phenomenal character as well as perceptual content The primacy of employing perceptual capacities in perception over their derivative employment in hallucination and illusion grounds the epistemic force of perceptual experience In this way the book provides a unified account of perceptual content consciousness and evidence

*Explaining Knowledge* Rodrigo Borges, Claudio de Almeida, Peter D. Klein, 2017-12-01 The Gettier Problem has shaped most of the fundamental debates in epistemology for more than fifty years Before Edmund Gettier published his famous 1963 paper it was generally presumed that knowledge was equivalent to true belief supported by adequate evidence Gettier presented a powerful challenge to that presumption This led to the development and refinement of many prominent epistemological theories for example defeasibility theories causal theories conclusive reasons theories tracking theories epistemic virtue theories and knowledge first theories The debate about the appropriate use of intuition to provide evidence in all areas of philosophy began as a debate about the epistemic status of the Gettier intuition The differing accounts of epistemic luck are all rooted in responses to the Gettier Problem The discussions about the role of false beliefs in the production of knowledge are directly traceable to Gettier's paper as are the debates between fallibilists and infallibilists Indeed it is fair to say that providing a satisfactory response to the Gettier Problem has become a litmus test of any adequate account of knowledge even those accounts that hold that the Gettier Problem rests on mistakes of various sorts This volume presents a collection of essays by twenty six experts including some of the most influential philosophers of our time on the various issues that arise from Gettier's challenge to the analysis of knowledge *Explaining Knowledge* sets the agenda for future work on the central problem of epistemology

*Does Perception Have Content?* Berit Brogaard, 2014-09-05 Within the contemporary philosophical debates over the nature of perception the question of whether perception has content in the first place recently has become a focus of discussion The most common view is that it does but a number of philosophers have questioned this claim The issue immediately raises a number of related questions What does it mean to say that perception has content Does perception have more than one kind of content Does perceptual content derive from the content of beliefs or judgments Should perceptual content be understood in terms of accuracy conditions Is naive realism compatible with holding that perception has content This volume brings together philosophers representing many different perspectives to address these and other central questions in the philosophy of perception *The Jerusalem Talmud* Heinrich Walter Guggenheimer, 2001 **Tractates**
