Longevity And Quality Of Life:

Longevity and Quality of Life Robert N. Butler, Claude Jasmin, 2012-12-06 Nations around the world are experiencing a spectacular increase in longevity. Society as a whole is being challenged by issues arising from this revolution in longevity. Although the specter of the loneliness and existential suffering of older citizens is such that some people under the age of 65 find it difficult to conceive of a long term future, persons over 85 have proven that aging does not necessarily preclude a healthy and productive life. Extraordinary progress in both curative and preventive medicine justifies optimism about the quality of life and state of well being that can be enjoyed even in great old age. We should look to professionals in diverse fields to develop creative solutions to the inevitable issues that will arise with aging. Governments must prepare for the future health of their citizens by making long term investments to educate all sectors of society in the value of good nutrition, exercise, and lifestyles that enhance well being throughout life. Also, governments should realize that the main cause of health care expenditure is serious illness which occurs in persons of all ages and not predominantly in older people. Early detection can help save lives as well. Health and longevity of life will ultimately end as a political issue. What is needed is long term government investments necessary for a viable health policy. The question arises: will world leaders be able to commit to such a policy? Two major socioeconomic phenomena may have a regulating effect on this issue. The first is the emergence of pressure groups that have come into being in response to a particular health issue such as AIDS. The second is the emergence of ethics committees in developed nations that deal solely with health issues.

Approaches to Improving the Quality of Life Abbott L. Ferriss, 2010-07-03 After measuring the Quality of Life and identifying the deficiencies in your community, what steps should you take to improve the Quality of Life? This volume reviews methods for improving the Quality of Life that are based upon improving each of the ten domains of the Quality of Life. Steps to improve health means of reducing environmental toxins, orientation to bring about better self concept and mental health, and so forth. In each such area, steps are set forth for eliminating undesirable and debilitating features of the domain. Social change comes about by the application of devised steps. The process has been called *telesis*. It is the application of intelligent, well tested interventions to bring about improvement. In some cases it may effect change quickly, and others may require a continuing process of adjustment and change. As a handbook for community workers, the volume provides a framework for intervention that could lead to a better tomorrow.
