Mathematical Logic and Set Theory Michael L. O'Leary, 2015-09-14 A mathematical introduction to the theory and applications of logic and set theory with an emphasis on writing proofs Highlighting the applications and notations of basic mathematical concepts within the framework of logic and set theory A First Course in Mathematical Logic and Set Theory introduces how logic is used to prepare and structure proofs and solve more complex problems The book begins with propositional logic including two column proofs and truth table applications followed by first order logic which provides the structure for writing mathematical proofs Set theory is then introduced and serves as the basis for defining relations functions numbers mathematical induction ordinals and cardinals The book concludes with a primer on basic model theory with applications to abstract algebra A First Course in Mathematical Logic and Set Theory also includes Section exercises designed to show the interactions between topics and reinforce the presented ideas and concepts Numerous examples that illustrate theorems and employ basic concepts such as Euclid's lemma the Fibonacci sequence and unique factorization Coverage of important theorems including the well ordering theorem completeness theorem compactness theorem as well as the theorems of Löwenheim Skolem Burali Forti Hartogs Cantor Schröder Bernstein and König An excellent textbook for students studying the foundations of mathematics and mathematical proofs A First Course in Mathematical Logic and Set Theory is also appropriate for readers preparing for careers in mathematics education or computer science In addition the book is ideal for introductory courses on mathematical logic and or set theory and appropriate for upper undergraduate transition courses with rigorous mathematical reasoning involving algebra number theory or analysis Mathematical logic, 2006 **A First Course in Logic** Mark Verus Lawson, 2018-12-07 A First Course in Logic is an introduction to first order

logic suitable for first and second year mathematicians and computer scientists There are three components to this course propositional logic Boolean algebras and predicate first order logic Logic is the basis of proofs in mathematics how do we know what we say is true and also of computer science how do I know this program will do what I think it will Surprisingly little mathematics is needed to learn and understand logic this course doesn't involve any calculus The real mathematical prerequisite is an ability to manipulate symbols in other words basic algebra Anyone who can write programs should have

this ability Mathematical Logic Joel W. Robbin, 2006-07-07 This self contained text will appeal to readers from diverse fields and varying backgrounds Topics include 1st order recursive arithmetic 1st and 2nd order logic and the arithmetization of syntax Numerous exercises some solutions 1969 edition Logic: a Brief Course Daniele Mundici, 2012-03-29 This short book geared towards undergraduate students of computer science and mathematics is specifically designed for a first course in mathematical logic A proof of Gödel's completeness theorem and its main consequences is given using Robinson's completeness theorem and Gödel's compactness theorem for propositional logic The reader will familiarize himself with many basic ideas and artifacts of mathematical logic a non ambiguous syntax logical equivalence and consequence relation the Davis Putnam procedure Tarski semantics Herbrand models the axioms of identity Skolem normal forms nonstandard models and interestingly enough proofs and refutations viewed as graphic objects The mathematical prerequisites are minimal the book is accessible to anybody having some familiarity with proofs by induction Many exercises on the relationship between natural language and formal proofs make the book also interesting to a wide range of students of philosophy and linguistics
