The William Lowell Putnam Mathematical Competition 1985-2000: Problems, Solutions, and Commentary Kiran S.

Kedlaya, Bjorn Poonen, Ravi Vakil, 2020-01-16 This third volume of problems from the William Lowell Putnam Competition is unlike the previous two in that it places the problems in the context of important mathematical themes The authors highlight connections to other problems to the curriculum and to more advanced topics The best problems contain kernels of

sophisticated ideas related to important current research and yet the problems are accessible to undergraduates The solutions have been compiled from the American Mathematical Monthly Mathematics Magazine and past competitors

Multiple solutions enhance the understanding of the audience explaining techniques that have relevance to more than the problem at hand In addition the book contains suggestions for further reading a hint to each problem separate from the full solution and background information about the competition The book will appeal to students teachers professors and indeed anyone interested in problem solving as a gateway to a deep understanding of mathematics

USA and International Mathematical Olympiads, 2003 Titu Andreescu, Zuming Feng, 2004

The Mathematical Olympiad examinations covering the USA Mathematical Olympiad USAMO and the International Mathematical Olympiad IMO have been published annually since 1976 This is the fourth volume in that series The IMO is a world mathematics competition for high school students that takes place each year in a different country Students from all over the world participate in this competition These Olympiad style exams consist of several challenging essay type problems Although a correct and complete solution to an Olympiad problem often requires deep analysis and careful argument the problems require no more than a solid background in high school mathematics coupled with a dose of mathematical ingenuity There are helpful hints provided for each of the problems These hints often help lead the student to a solution of the problem Complete solutions to each of the problems is also included and many of the problems are presented together with a collection of remarkable solutions developed by the examination committees contestants and experts during or after the contest For each problem with multiple solutions some common crucial results are presented at the beginning of these solutions

USA and International Mathematical Olympiads 2004 Titu Andreescu, Zuming Feng, Po-Shen Loh, 2005 The Mathematical Olympiad examinations covering the USA Mathematical Olympiad USAMO and the International Mathematical Olympiad IMO have been published annually since 1976 The IMO is the world mathematics championship for high school students It takes place every year in a different country The IMO competitions help to discover challenge and encourage mathematically gifted young people all over the world In addition to presenting their own carefully written solutions to the problems presented here the editors have provided remarkable solutions developed by the examination committees contestants and experts during and after the contests They also provide a comprehensive guide to other materials on advances problem solving This collection of excellent problems and beautiful solutions is a valuable companion for students who wish to develop their interest in mathematics outside the school curriculum and to deepen their knowledge of mathematics

Aha! Solutions Martin J. Erickson, 2009-01-22 Every mathematician beginner amateur and professional alike thrills to find simple elegant solutions to seemingly difficult problems Such happy resolutions are called aha solutions a phrase popularized by mathematics and science writer Martin Gardner Aha solutions are surprising stunning and scintillating they reveal the beauty of mathematics This book is a collection of problems with aha solutions The problems are at the level of the college mathematics student but there should be something of interest for the high school student the teacher of mathematics the math fan and anyone else who loves mathematical challenges This collection includes one hundred problems in the areas of arithmetic geometry algebra calculus probability number theory and combinatorics The problems start out easy and generally get more difficult as you progress through the book A few solutions require the use of a computer An important feature of the book is the bonus discussion of related mathematics that follows the solution of each problem This material is there to entertain and inform you or point you to new questions If you don't remember a mathematical definition or concept there is a Toolkit in the back of the book that will help

The Contest Problem Book VIII J. Douglas Faires, David Wells, 2022-02-25 For more than 50 years the Mathematical Association of America has been engaged in the construction and administration of challenging contests for students in American and Canadian high schools The problems for these contests are constructed in the hope that all high school students interested in mathematics will have the opportunity to participate in the contests and will find the experience mathematically enriching These contests are intended for students at all levels from the average student at a typical school who enjoys mathematics to the very best students at the most special school In the year 2000 the Mathematical Association of America initiated the American Mathematics Competitions 10 AMC 10 for students up to grade 10 The Contest Problem Book VIII is the first collection of problems from that competition covering the years 2001 2007 J Douglas Faires and David Wells were the joint directors of the AMC 10 and AMC 12 during that period and have assembled this book of problems and solutions There are 350 problems from the first 14 contests included in this collection A Problem Index at the back of the book classifies the problems into the following major subject areas Algebra and Arithmetic Sequences and Series Triangle Geometry Circle Geometry Quadrilateral Geometry Polygon Geometry Counting Coordinate Geometry Solid Geometry Discrete Probability Statistics Number Theory and Logic The major subject areas are then broken down into subcategories for ease of reference The problems are cross referenced when they represent several subject areas *The Contest Problem Book IX* David Wells, J. Douglas Faires, 2021-02-22 This is the ninth book of problems and solutions from the American Mathematics Competitions AMC contests It chronicles 325 problems from the thirteen AMC 12 contests given in the years between 2001 and 2007 The authors were the joint directors of the AMC 12 and the AMC 10 competitions during that period The problems have all been edited to ensure that they conform to the current style of the AMC 12 competitions Graphs and figures have been redrawn to make them more consistent in form and style and the solutions to the problems have been both edited and supplemented A problem index at the back of the book classifies the problems into subject areas of Algebra Arithmetic Complex Numbers Counting Functions Geometry Graphs Logarithms Logic Number Theory Polynomials Probability Sequences Statistics and Trigonometry A problem that uses a combination of these areas is listed multiple times The problems on these contests are posed by members of the mathematical community in the hope that all secondary school students will have an opportunity to participate in problem solving and an enriching mathematical experience The William Lowell Putnam Mathematical Competition Gerald L. Alexanderson, Leonard F. Klosinski, Loren C. Larson, 2003 The Putnam Competition has since 1928 been providing a challenge to gifted college mathematics students This book the second of the Putnam Competition volumes contains problems with their solutions for the years 1965 1984 Additional solutions are presented for many of the problems Included is an essay on recollections of the first Putnam Exam by Herbert Robbins as well as appendices listing the winning teams and students from 1965 through 1984 This volume offers the problem solver an enticing sample of challenging problems and their solutions In 1980 the MAA published the first William Lowell Putnam

Mathematical Competition book covering the contest from 1938 to 1964 In 2002 the third of the Putnam problem books appeared covering the years 1985 through 2000 All three of these books belong on the bookshelf of students teachers and all interested in problem solving
