Mathematical Themes Allan Gray, Carol Gray, 1996 *A Remarkable Collection of Babylonian Mathematical Texts* Jöran Friberg, 2007-07-31 The book analyzes the mathematical tablets from the private collection of Martin Schoyen. It includes analyses of tablets which have never been studied before. This provides new insight into Babylonian understanding of sophisticated mathematical objects. The book is carefully written and organized. The tablets are classified according to mathematical content and purpose while drawings and pictures are provided for the most interesting tablets.

The Mandelbrot Set, Theme and Variations Tan Lei, 2000-04-13 The Mandelbrot set is a fractal shape that classifies the dynamics of quadratic polynomials. It has a remarkably rich geometric and combinatorial structure. This volume provides a systematic exposition of current knowledge about the Mandelbrot set and presents the latest research in complex dynamics. Topics discussed include the universality and the local connectivity of the Mandelbrot set, parabolic bifurcations, critical circle homeomorphisms, absolutely continuous invariant measures, and matings of polynomials along with the geometry, dimension, and local connectivity of Julia sets. In addition to presenting new work, this collection documents important results hitherto unpublished or difficult to find in the literature. This book will be of interest to graduate students in mathematics, physics, and mathematical biology, as well as researchers in dynamical systems and Kleinian groups.

Philosophy, Learning and the Mathematics Curriculum Xuehui Xie,Phil Francis Carspecken,2019-02-18 Mathematics curriculums used in progressive classrooms of the United States and in classrooms of the People s Republic of China presuppose markedly different philosophies Xie and Carspecken reconstruct different assumptions operating implicitly within mathematics curriculums developed by the Ministry of Education in China and NCTM in the United States Each curriculum is constructed upon a deep structure holistically integrating presuppositions about the nature of the human self society learning processes language concepts human development freedom authority and the epistemology and ontology of mathematical knowledge Xie and Carspecken next present an extended discussion of the two main philosophical traditions informing these curriculums dialectical materialism in the case of the Chinese mathematics curriculum and Dewey s instrumental pragmatism in the case of NCTM Both

philosophies were developed as movements out of Hegelian idealism while retaining the anti dualist and anti empiricist insights of Hegel's thought. The history of dialectical materialism and Dewey's instrumentalism is carefully examined by the authors to identify both similarities and sharp differences in the resulting mature philosophies. Drawing upon more recent philosophies of intersubjectivity, Brandom, Habermas and dialectical materialist psychologies, Vygotsky, Luria, the authors conclude this book with arguments for overcoming the limitations of a purely instrumentalist framework and for expanding potentialities implicit within dialectical philosophies. This book will be of value to a broad audience including mathematics educators, philosophers, curriculum theorists, social theorists, and those who work in comparative education and learning science.
