present and discuss examples of mathematics classroom life from a range of multilingual classroom settings and use these examples to draw out and discuss key issues for the teaching and learning of mathematics and language. These issues relate to pedagogy, students learning, curriculum, assessment policy and aspects of educational theory. The contributions are based on research conducted in mathematics classrooms in Europe, South Asia, North America and Australia. Recurring issues for the learning of mathematics include the relationship between language and mathematics, the relationship between formal and informal mathematical language and the relationship between students' home languages and the official language of schooling.

Mathematics at the Margins Elizabeth Warren, Jodie Miller, 2016-03-17 This book reports the impact a four year longitudinal study, Representations, Oral Language and Engagement in Mathematics (RoleM), had on teachers and students from 16 schools in disadvantaged contexts. It offers theories with regard to the interplay between teaching and learning mathematics as teachers and students in these contexts implement a mathematics program. The data are longitudinal, drawn from 154 teachers and their students up to 1738 students from the first four years of school (Foundation to Year 3). To ascertain the effectiveness of the RoleM Professional Learning model, teachers were interviewed three times a year and pre and post tests were administered to students at the beginning and end of each year. Students' results indicated that all students' understanding of mathematics improved significantly, with the ESL students showing the greatest gains. Their results matched the norm referenced expectations for all Australian students of this age. This book shares the journey of these teachers, Indigenous teacher aides and students. It outlines the dimensions of the research findings that supported teachers to become effective teachers of mathematics and assisted students in becoming successful learners of mathematics. The book also draws on the expertise of researchers from both Canada and New Zealand. They share the similarities and the differences between RoleM findings and their own contexts in order to draw general conclusions for the effective teaching and learning of mathematics at the margins of society.

International Handbook of Research and Development in Technology Education, 2009-01-01 This international handbook reflects on the development of the field of technology education. From reviewing how the field has developed and its current strengths, consideration is given to where the field might go and how it can be supported in this process. This handbook argues that technology is an essential part of education for all and it provides a unique coverage of the developing field of technology education. It is divided into eight sections from consideration of different approaches to education in different countries, through thinking about the nature of technology, perceptions of technology, relationships between science, technology and society, learning and teaching, assessment, teacher education and professional development, and developed and developing research approaches. This book constitutes a significant collection of work from numerous countries and authors actively engaged in technology education research and development. It is intended for graduate students, academics, researchers, curriculum developers, professional development providers, policy makers and practitioners. The development of this handbook represents an important step in the maturity of
