Mathematics And War:

Mathematics and War Bernhelm Booß-Bavnbek, Jens Høyrup, 2012-12-06 Mathematics has for centuries been stimulated financed and credited by military purposes Some mathematical thoughts and mathematical technology have also been vital in war During World War II mathematical work by the Anti Hitler coalition was part of an aspiration to serve humanity and not help destroy it At present it is not an easy task to view the bellicose potentials of mathematics in a proper perspective The book presents historical evidence and recent changes in the interaction between mathematics and the military It discusses the new mathematically enhanced development of military technology which seems to have changed the very character of modern warfare

War Games Philipp Von Hilgers, 2012-03-16 The convergence of military strategy and mathematics in war games from medieval to modern times For centuries both mathematical and military thinkers have used game like scenarios to test their visions of mastering a complex world through symbolic operations By the end of World War I mathematical and military discourse in Germany simultaneously discovered the game as a productive concept Mathematics and military strategy converged in World War II when mathematicians designed fields of operation In this book Philipp von Hilgers examines the theory and practice of war games through history from the medieval game boards captured on parchment to the paper map exercises of the Third Reich Von Hilgers considers how and why war games came to exist why mathematical and military thinkers created simulations of one of the most unpredictable human activities on earth Von Hilgers begins with the medieval rythmomachia or Battle of Numbers then reconstructs the ideas about war and games in the baroque period He investigates the role of George Leopold von Reischwitz's tactical war game in nineteenth century Prussia and describes the artifact itself a game board topped table with drawers for game implements He explains Clausewitz's emphasis on the fog of war and the accompanying element of incalculability examines the contributions of such thinkers as Clausewitz Leibniz Wittgenstein and von Neumann and investigates the war games of the German military between the two World Wars Baudrillard declared this to be the age of simulacra war games stand contrariwise as simulations that have not been subsumed in absolute virtuality

The War of Guns and Mathematics David Aubin, Catherine Goldstein, 2014-10-07 For a long time World War I has been shortchanged by the historiography of science Until recently World War II was usually considered as the defining event for the formation of the modern relationship between science and society In this context the effects of the First World War by contrast were often limited to the massive deaths of promising young scientists By focusing on a few key places Paris Cambridge Rome Chicago and others the present book gathers studies representing a broad spectrum of positions adopted by mathematicians about the conflict from militant pacifism to military scientific or ideological mobilization The use of mathematics for war is thoroughly examined This book suggests a new vision of the long term influence of World War I on mathematics and mathematicians Continuities and discontinuities in the structure and organization of the mathematical sciences are discussed as well as their images in various milieux Topics of research and the

values with which they were defended are scrutinized This book in particular proposes a more in depth evaluation of the issue of modernity and modernization in mathematics The issue of scientific international relations after the war is revisited by a close look at the situation in a few Allied countries France Britain Italy and the USA The historiography has emphasized the place of Germany as the leading mathematical country before WWI and the absurdity of its postwar ostracism by the Allies The studies presented here help explain how dramatically different prewar situations prolonged interaction during the war and new international postwar organizations led to attempts at redrafting models for mathematical developments

Rods, Sets and Arrows Dirk De Bock,Geert Vanpaemel,2019-12-10 For anyone interested in the history and effects of the

introduction of so called Modern Mathematics or Math matique Moderne or New Mathematics etc this book by Dirk De Bock and Geert Vanpaemel is essential reading The two authors are experienced and highly qualified Belgian scholars and the book looks carefully at events relating to school mathematics for the period from the end of World War II to 2010 Initially the book focuses on events which helped to define the modern mathematics revolution in Belgium before and during the 1960s The book does much more than that however for it traces the influence of these events on national and international debates during the early phases of the reform By providing readers with translations into English of relevant sections of key Continental documents outlining the major ideas of leading Continental scholars who contributed to the Math matique Moderne movement this book makes available to a wide readership the theoretical social and political backdrops of Continental new mathematics reforms In particular the book focuses on the contributions made by Belgians such as Paul Libois Willy Servais Fr d rique Lenger and Georges Papy The influence of modern mathematics fell away rapidly in the 1970s however and the authors trace the rise and fall from that time into the 21st century of a number of other approaches to school mathematics in Belgium in other Western European nations and in North America In summary this is an outstanding landmark publication displaying the fruits of deep scholarship and careful research based on extensive analyses of primary sources

International Reflections on the Netherlands Didactics of Mathematics Marja van den Heuvel-Panhuizen, 2019-08-13 This open access book inspired by the ICME 13 Thematic Afternoon on European Didactic Traditions takes readers on a journey with mathematics education researchers developers and educators in eighteen countries who reflect on their experiences with Realistic Mathematics Education RME the domain specific instruction theory for mathematics education developed in the Netherlands since the late 1960s Authors from outside the Netherlands discuss what aspects of RME appeal to them their criticisms of RME and their past and current RME based projects It is clear that a particular approach to mathematics education cannot simply be transplanted to another country As such in eighteen chapters the authors describe how they have adapted RME to their individual circumstances and view on mathematics education and tell their personal stories about how RME has influenced their thinking on mathematics education
