Sayeski, 2023-12-06 Despite being the most common learning disability dyslexia is widely misunderstood Shrouded by myths and misperceptions a lack of direct practical information on dyslexia leaves many teachers and families frustrated Well intentioned teachers tell parents that all kids learn differently and at a different pace but as the months turn into years the gap between skilled readers and those who struggle widens The antidote to wait and see and more of the same is information In this book Sayeski translates research from neuroscience cognitive psychology linguistics and education into accessible information to help teachers and parents unravel the complexities of skilled reading Unraveling dyslexia requires an understanding of what it means to read both the accurate recognition of words and the capacity to bring meaning to those words and identifying where and how difficulty can occur with these processes To do this Sayeski situates the challenges some students experience in learning to read within the context of the development of English orthography i e written language and the history of reading instruction in the schools Sayeski then presents what reading science has revealed about individual differences in reading Within the book s final chapters readers will find practical information on how to provide the type of structured literacy instruction required to put students with dyslexia on the path to reading This book is designed for teachers administrators and parents seeking information that can be immediately applied to improve the outcomes of students with dyslexia or who struggle learning to read It is never too soon to address signs of difficulty with reading The aim of this book is to provide readers with the knowledge they need to act now to provide students with the gift of literacy **An Anthropology of Puzzles** Marcel Danesi, 2020-05-15 *An Anthropology of Puzzles* argues that the human brain is a puzzling organ which allows humans to literally solve their own problems of existence through puzzle format Noting the presence of puzzles everywhere in everyday life Marcel Danesi looks at puzzles in society since the dawn of history showing how their presence has guided large sections of human history from discoveries in mathematics to disquisitions in philosophy Danesi

examines the cognitive processes that are involved in puzzle making and solving and connects them to the actual physical manifestations of classic puzzles Building on a concept of puzzles as based on Jungian archetypes such as the river crossing image the path metaphor and the journey Danesi suggests this could be one way to understand the public fascination with puzzles As well as drawing on underlying mental archetypes the act of solving puzzles also provides an outlet to move beyond biological evolution and Danesi shows that puzzles could be the product of the same basic neural mechanism that produces language and culture Finally Danesi explores how understanding puzzles can be a new way of understanding our human culture
