National Audit Office, 2008 In 2007 the Department for Children Schools and Families commissioned Sir Peter Williams to undertake an independent review of the

quality of primary mathematics teaching and his report was published in June 2008 This report evaluates in particular raising attainment and progress in mathematics and narrowing achievement gaps between certain pupils and their peers and the delivery and effectiveness of the Primary National Strategy's resources and interventions and their impact on pupil and school performance It was found that bringing greater structure and consistency to the way primary mathematics is taught the Strategy initially helped to improve test results at Key Stage 2 Since 2000 however attainment has levelled off It is too early to tell if the 2007 revisions to the Strategy will deliver the step change required The report makes recommendations on this basis

Frontiers in the Acquisition of Literacy Claire M. Fletcher-Flinn, 2015-09-28 Learning to read and to spell are two of the most important cultural skills that must be acquired by children and for that matter anyone learning a second language We are not born with an innate ability to read A reading system of mental representations that enables us to read must be formed in the brain Learning to read in alphabetic orthographies is the acquisition of such a system which links mental representations of visual symbols letters in print words with pre existing phonological sound and semantic comprehension cognitive systems for language Although spelling draws on the same representational knowledge base and is usually correlated with reading the acquisition processes involved are not quite the same Spelling requires the sequential production of letters in words and at beginning levels there may not be a full degree of integration of phonology with its representation by the orthography Reading on the other hand requires only the recognition of a word for pronunciation Hence spelling is more difficult than reading and learning to spell may necessitate more complete representations or more conscious access to them The learning processes that children use to acquire such cognitive systems in the brain and whether these same processes are universal across different languages and orthographies are central theoretical questions

Most children learn to read and spell their language at the same time thus the co ordination of these two facets of literacy acquisition needs explication as well as the effect of different teaching approaches on acquisition Lack of progress in either reading and or spelling is also a major issue of concern for parents and teachers necessitating a cross disciplinary approach to the problem encompassing major efforts from researchers in neuroscience cognitive science experimental psychology and education The purpose of this Research Topic is to summarize and review what has been accomplished so far and to further explore these general issues Contributions from different perspectives are welcomed and could include theoretical computational and empirical works that focus on the acquisition of literacy including cross orthographic research
