**Search and Classification Using Multiple Autonomous Vehicles** Yue Wang, Islam I. Hussein, 2012-03-30 Search and Classification Using Multiple Autonomous Vehicles provides a comprehensive study of decision making strategies for domain search and object classification using multiple autonomous vehicles MAV under both deterministic and probabilistic frameworks It serves as a first discussion of the problem of effective resource allocation using MAV with sensing limitations i e for search and classification missions over large scale domains or when there are far more objects to be found and classified than there are autonomous vehicles available Under such scenarios search and classification compete for limited sensing resources This is because search requires vehicle mobility while classification restricts the vehicles to the vicinity of any objects found The authors develop decision making strategies to choose between these competing tasks and vehicle motion control laws to achieve the proposed management scheme Deterministic Lyapunov based probabilistic Bayesian based and risk based decision making strategies and sensor management schemes are created in sequence Modeling and analysis include rigorous mathematical proofs of the proposed theorems and the practical consideration of limited sensing resources and observation costs A survey of the well developed coverage control problem is also provided as a foundation of search algorithms within the overall decision making strategies Applications in both underwater sampling and space situational awareness are investigated in detail The control strategies proposed in each chapter are followed by illustrative simulation results and analysis Academic researchers and graduate students from aerospace robotics mechanical or electrical engineering backgrounds interested in multi agent coordination and control in detection and estimation or in Bayes filtration will find this text of interest *Classroom Cupboard* Lisa V. **Culturally Specific Pedagogy in the Mathematics Classroom** Jacqueline Leonard, 2017-10-03 Culturally Specific Pedagogy in the Mathematic Classroom offers a wide variety of conceptual and curricular resources for teachers interested in teaching mathematics in a way that challenges stratification based upon race class gender and other forms of oppression that students face in today's world With the publication of this book all teachers will have available to them instructional strategies in mathematics for meeting the academic needs of culturally diverse students They will have an explanation of the linkage between culture and students mathematical cognition and problem solving The ease in which Leonard brings the reader along and the caring way she tells a story about making mathematics a fun and social justice experience makes for an exciting learning opportunity for all students and teachers Carl A Grant University Wisconsin Madison United States From the Foreword Mathematics educators are in a period of deep concern about our ability to educate all students in mathematics Most students of color do not have the opportunities to fully learn mathematics Nothing more important can be done for these students and their teachers than to publish this book addressing the miseducation of these students and offering a way

to change what we are doing Carol E Malloy University of North Carolina Chapel Hill United States This compelling text advocates the use of culturally specific pedagogy to enhance the mathematics instruction of diverse students It accomplishes this by making clear the link between research and practice and offering lesson templates that teachers can use with ethnically and culturally diverse students and with females Specifically the text draws on sociocultural theory and research on culture and mathematics cognition to focus on three goals using qualitative research to extend the literature on culturally based education to African American and Latina o c *Congressional Record* United States. *The Mathematical Theory of Information* Jan Kåhre,2012-12-06 The general concept of information is here for the first time defined mathematically by adding one single axiom to the probability theory This Mathematical Theory of Information is explored in fourteen chapters 1 Information can be measured in different units in anything from bits to dollars We will here argue that any measure is acceptable if it does not violate the Law of Diminishing Information This law is supported by two independent arguments one derived from the Bar Hillel ideal receiver the other is based on Shannon s noisy channel The entropy in the classical information theory is one of the measures conforming to the Law of Diminishing Information but it has however properties such as being symmetric which makes it unsuitable for some applications The measure reliability is found to be a universal information measure 2 For discrete and finite signals the Law of Diminishing Information is defined mathematically using probability theory and matrix algebra 3 The Law of Diminishing Information is used as an axiom to derive essential properties of information Byron s law there is more information in a lie than in gibberish Preservation no information is lost in a reversible channel Etc The Mathematical Theory of Information supports colligation i e the property to bind facts together making two plus two greater than four Colligation is a must when the information carries knowledge or is a base for decisions In such cases reliability is always a useful information measure Entropy does not allow colligation An

Introduction to Disturbance Ecology Corrado Battisti, Gianluca Poeta, Giuliano Fanelli, 2016-07-19 This book represents an introductory review of disturbance ecology and threat analysis providing schematic concepts and approaches useful for work on sites that are affected by the impact of human actions It is aimed at conservation and environmental practitioners who will find tips for choosing methods and approaches when there are conflicts between the natural components and human activity It is also addressed to students of applied ecology ecosystem management land use planning and environmental impact assessment It discusses a number of topics covered in the programs of many university courses related to basic ecology and ecology of disturbance the latter constituting a field of great interest because of its implications and repercussions in applied territorial science The book is divided into two parts the first focuses on the theoretical and disciplinary framework of the ecology of disturbance while the second is devoted to the analysis of anthropogenic threats This in particular discusses the most recent approach which uses a conventional nomenclature to allow a coarse grained quantification and objective assessment of threat impact on different environmental components Such an approach facilitates the comparison of hierarchically different events and therefore helps define the priorities for management and conservation strategies
