Research in History and Philosophy of Mathematics Maria Zack, David Waszek, 2023-05-11 This volume contains eighteen papers that have been collected by the Canadian Society for History and Philosophy of Mathematics It showcases rigorously reviewed contemporary scholarship on an interesting variety of topics in the history and philosophy of mathematics as well as the teaching of the history of mathematics Some of the topics explored include Arabic editions of Euclid's Elements from the thirteenth century and their role in the assimilation of Euclidean geometry into the Islamic intellectual tradition Portuguese sixteenth century recreational mathematics as found in the Tratado de Prática Darysmetica A Cambridge correspondence course in arithmetic for women in England in the late nineteenth century The mathematical interests of the famous Egyptologist Thomas Eric T E Peet The history of Zentralblatt für Mathematik and Mathematical Reviews and their role in creating a publishing infrastructure for a global mathematical literature The use of Latin squares for agricultural crop experiments at the Rothamsted Experimental Station The many contributions of women to the advancement of computing techniques at the Cavendish Laboratory at the University of Cambridge in the 1960s The volume concludes with two short plays one set in Ancient Mesopotamia and the other in Ancient Egypt that are well suited for use in the mathematics classroom Written by leading scholars in the field these papers are accessible not only to mathematicians and students of the history and philosophy of mathematics but also to anyone with a general interest in mathematics

A Primer for Mathematics Competitions Alexander Zawaira, Gavin Hitchcock, 2008-10-31 The importance of mathematics competitions has been widely recognised for three reasons they help to develop imaginative capacity and thinking skills whose value far transcends mathematics they constitute the most effective way of discovering and nurturing mathematical talent and they provide a means to combat the prevalent false image of mathematics held by high school students as either a fearsomely difficult or a dull and uncreative subject This book provides a comprehensive training resource for competitions from local and provincial to national Olympiad level containing hundreds of diagrams and graced by many light hearted cartoons It features a large collection of what mathematicians call beautiful problems non routine provocative fascinating and challenging problems often with elegant solutions It features careful systematic exposition of a selection of the most important topics encountered in mathematics competitions assuming little prior knowledge Geometry trigonometry mathematical induction inequalities Diophantine equations number theory sequences and series the binomial theorem and combinatorics are all developed in a gentle but lively manner liberally illustrated with examples and consistently motivated by attractive appetiser problems whose solution appears after the relevant theory has been expounded Each chapter is presented as a toolchest of instruments designed for cracking the problems collected at the end of the chapter Other topics such as algebra co ordinate geometry functional equations and probability are introduced and elucidated in the posing and solving of the large collection of

miscellaneous problems in the final toolchest An unusual feature of this book is the attention paid throughout to the history of mathematics the origins of the ideas the terminology and some of the problems and the celebration of mathematics as a multicultural cooperative human achievement As a bonus the aspiring mathlete may encounter in the most enjoyable way possible many of the topics that form the core of the standard school curriculum     **Bulletin** United States.
