Wriedt,1999-12-01 This book is an edited volume of nine papers covering the different variants of the generalized multipole techniques GMT The papers were presented at the recent 3rd Workshop on Electromagnetics and Light Scattering Theory and Applications which focused on current GMT methods These include the multiple multipole method MMP the discrete sources method DSM Yasuura s method method of auxiliary sources and null field method with discrete sources Each paper presents a full theoretical description as well as some applications of the method in electrical engineering and optics It also includes both 2D and 3D methods and other applications developed in the former Soviet Union and Japan **Theoretical Acoustics and Numerical Techniques** P. Filippi,2014-05-04 **Building Bridges: Connections and Challenges in Modern Approaches to Numerical Partial Differential Equations** Gabriel R. Barrenechea,Franco Brezzi,Andrea Cangiani,Emmanuil H. Georgoulis,2016-10-03 This volume contains contributed survey papers from the main speakers at the LMS EPSRC Symposium Building bridges connections and challenges in modern approaches to numerical partial differential equations This meeting took place in July 8 16 2014 and its main purpose was to gather specialists in emerging areas of numerical PDEs and explore the connections between the different approaches The type of contributions ranges from the theoretical foundations of these new techniques to the applications of them to new general frameworks and unified approaches that can cover one or more than one of these emerging techniques *Basic Principles and Applications* C.A. Brebbia,2012-12-06 As the Boundary Element Method develops into a tool of engineering analysis more effort is dedicated to studying new applications and solving different problems This book contains chapters on the basic principles of the technique time dependent problems fluid mechanics hydraulics geomechanics and plate bending The number of non linear and time dependent problems which have become amenable to solution using boundary elements have induced many researchers to investigate in depth the basis of the method Chapter 0 of this book presents an approach based on weighted residual and error approximations which permits easy construction of the governing boundary integral equations Chapter I reviews the theoretical aspects of integral equation formulations with emphasis in their mathematical aspects The analysis of time

dependent problems is presented in Chap 2 which describes the time and space dependent integral formulation of heat conduction problems and then proposes a numerical procedure and time marching algorithm Chapter 3 reviews the application of boundary elements for fracture mechanics analysis in the presence of thermal stresses The chapter presents numerical results and the considerations on numerical accuracy are of interest to analysts as well as practising engineers

Inverse Problems in Engineering Mechanics IV Mana Tanaka, 2003-11-19 This latest collection of proceedings provides a state of the art review of research on inverse problems in engineering mechanics Inverse problems can be found in many areas of engineering mechanics and have many successful applications They are concerned with estimating the unknown input and or the characteristics of a system given certain aspects of its output The mathematical challenges of such problems have to be overcome through the development of new computational schemes regularization techniques objective functionals and experimental procedures The papers within this represent an excellent reference for all in the field Providing a state of the art review of research on inverse problems in engineering mechanics Contains the latest research ideas and related techniques A recognized standard reference in the field of inverse problems Papers from Asia Europe and America are all well represented

Low Frequency Scattering George Dassios, Ralph Kleinman, 2000 Scattering theory deals with the interactions of waves with obstacles in their path and low frequency scattering occurs when the obstacles involved are very small This book gives an overview of the subject for graduates and researchers for the first time unifying the theories covering acoustic electromagnetic and elastic waves

Electromagnetic Theory and Applications for Photonic Crystals Kiyotoshi Yasumoto, 2018-10-03 Photonic technology promises much faster computing massive parallel processing and an evolutionary step in the digital age The search continues for devices that will enable this paradigm and these devices will be based on photonic crystals Modeling is a

key process in developing crystals with the desired characteristics and performance and Electromagnetic Theory and Applications for Photonic Crystals provides the electromagnetic theoretical models that can be effectively applied to modeling photonic crystals and related optical devices The book supplies eight self contained chapters that detail various analytical numerical and computational approaches to the modeling of scattering and guiding problems For each model the chapter begins with a brief introduction detailed formulations of periodic structures and photonic crystals and practical applications to photonic crystal devices Expert contributors discuss the scattering matrix method multipole theory of scattering and propagation model of layered periodic arrays for photonic crystals the multiple multipole program the mode matching method for periodic metallic structures the method of lines the finite difference frequency domain technique and the finite difference time domain technique Based on original research and application efforts Electromagnetic Theory and Applications for Photonic Crystals supplies a broad array of practical tools for analyzing and designing devices that will form the basis for a new age in computing

Finite or Infinite Dimensional Complex Analysis and Applications Le Hung Son, Wolfgang Tutschke, Chung-Chun Yang, 2013-12-01 There is almost no field in Mathematics which does not use Mathematical Analysis Computer methods in Applied Mathematics too are often based on statements and procedures of Mathematical Analysis An important part of Mathematical Analysis is Complex Analysis because it has many applications in various branches of Mathematics Since the field of Complex Analysis and its applications is a focal point in the Vietnamese research programme the Hanoi University of Technology organized an International Conference on Finite or Infinite Dimensional Complex Analysis and Applications which took place in Hanoi from August 8 12 2001 This conference was the 9 one in a series of conferences which take place alternately in China Japan Korea and Vietnam each year The first one took place at Pusan University in Korea in 1993 The preceding 8 conference was held in Shandong in China in August 2000 The 9 conference of the series was the first one which took place above mentioned series of conferences in Vietnam Present trends in Complex Analysis reflected in the present volume are mainly concentrated in the following four research directions

- 1 Value distribution theory including meromorphic functions meromorphic mappings as well as p -adic functions over fields of finite or zero characteristic and its applications
- 2 Holomorphic functions in several finitely or infinitely many complex variables
- 3 Clifford Analysis i.e. complex methods in higher dimensional real Euclidean spaces
- 4 Generalized analytic functions
