Tepfenhart, Walling Cyre, 2007-07-23 With all of the news about the Internet and the Y2K problem it is easy to forget that other areas of computer science still exist Reading the newspaper or watching the television conveys a very warped view of what is happening in computer science This conference illustrates how a maturing subdiscipline of computer science can continue to grow and integrate within it both old and new approaches despite or perhaps due to a lack of public awareness The conceptual graph community has basically existed since the 1984 publication of John Sowa's book *Conceptual Structures Information Processing In Mind and Machine* In this book John Sowa laid the foundations for a knowledge representation model called conceptual graphs based on semantic networks and the existential graphs of C S Peirce Conceptual graphs constitutes a very powerful and expressive knowledge representation scheme inheriting the benefits of logic and the mathematics of graphs The expressiveness and formal underpinnings of conceptual graph theory have attracted a large international community of researchers and scholars The International Conferences on Conceptual Structures and this is the seventh in the series is the primary forum for these researchers to report their progress and activities As in the past the doors were open to admit alternate representation models and approaches Subject Guide to Books in Print, 1991 High Energy Physics 99 Proceedings of the International Europhysics Conference on High Energy Physics, Tampere, Finland, 15-21 July 1999 K Huitu, H Kurki-Suonio, J Maalampi, 2000-01-01 High Energy Physics 99 contains the 18 invited plenary presentations and 250 contributions to parallel sessions presented at the International Europhysics Conference on High Energy Physics The book provides a comprehensive survey of the latest developments in high energy physics Topics discussed include hard high energy structure functions soft interactions heavy flavor the standard model hadron spectroscopy neutrino masses particle astrophysics field theory and detector development **Introduction to General Relativity and the Cosmological Constant Problem** Marcelo Samuel Berman, 2007 This book is an introductory text in General Relativity while also focusing some solutions to the cosmological constant problem which consists in an amazing 100 orders of magnitude discrepancy between the value of this constant in the present Universe and its estimated value in the very early epoch The author suggests that the constant is in fact a time varying function of the age of the Universe The book offers a wealth of cosmological models treats up to date findings like the verification of the Lense Thirring effect in the year 2004 and the recently published research by Cooperstock and Tieu 2005 suggesting that dark matter is not a necessary concept in order to explain the rotational velocities of stars around galaxies nuclei This is a mathematical cosmology textbook that may lead undergraduates and graduate students to one of the frontiers of research while keeping the prerequisites to a minimum because most of the theory in the book requires only prior knowledge of Calculus and a University Physics course
