Berkeley's Puzzle John Campbell,Quassim Cassam,2014-08-21 Sensory experience seems to be the basis of our knowledge and conception of mind independent things The puzzle is to understand how that can be even if the things we experience apples tables trees etc are mind independent how does our sensory experience of them enable us to conceive of them as mind independent George Berkeley thought that sensory experience can only provide us with the conception of mind dependent things things which cannot exist when they aren t being perceived It s easy to dismiss Berkeley s conclusion but harder to see how to avoid it In this book John Campbell and Quassim Cassam propose very different solutions to Berkeley s Puzzle For Campbell sensory experience can be the basis of our knowledge of mind independent things because it is a relation more primitive than thought between the perceiver and high level objects and properties in the mind independent world Cassam opposes this relationalist solution to the Puzzle and defends a representationalist solution sensory experience can give us the conception of mind independent things because it represents its objects as mind independent but does so without presupposing concepts of mind independent things This book is written in the form of a debate between two rival approaches to understanding the relationship between concepts and sensory experience Although Berkeley s Puzzle frames the debate the questions addressed by Campbell and Cassam aren t just of historical interest They are among the most fundamental questions in philosophy
