Liberalisation in Brazil Delphine Defossez, 2022-05-30 The book starts from the premise that the current aviation framework in Brazil cannot sustain a full liberalisation in the long run While the competition rules in place offer a strong framework which only requires small modifications these rules are not enough to foster a healthy liberalisation In fact until recently Brazilian airlines were operating in a homogenous market where competition was artificial This artificial competition obtained through the imposition of a legal obligation to provide water and a snack and grant a 23kg bag allowance has resulted in a highly concentrated domestic market with very few players Compared to other same size markets such as China or India Brazil is far behind in terms of airlines operating at national level Consequently the opening of the domestic market must be closely regulated to avoid national carriers suffocating under external pressure For this reason state intervention during the liberalisation process is crucial State intervention is also with regard to the protection of passengers The other major problem is the protection framework for passengers which is much too uncertain and burdensome In a sense it is detrimental to the domestic market and passengers Indeed there is no harmonisation of passenger compensation leading to contradictory judgments and possible high moral damages which hinders legal certainty for airlines Compared to the situation in the EU in Brazil airlines have a limited range of defences which are often dismissed

by courts This book therefore critically analyses the policies and regulations in place by mainly comparing the Brazilian framework to the European one This choice has been motivated by the fact that European liberalisation is considered the best so far and as Brazil is starting this process much later it could benefit from the European experience This book will be of particular interest to scholars and practitioners interested in the Brazilian system **Markets, Pricing, and Deregulation**

of Utilities Michael A. Crew, Joseph C. Schuh, 2012-12-06 Markets Pricing and Deregulation of Utilities examines the effects of deregulation on the energy and telecommunications industries in an economic environment that has changed dramatically since deregulation was first introduced in those industries several years ago The contributors to this book discuss the aspects of deregulation that appear to be succeeding and those that seem to be failing Within that framework they offer insight as to the possible next stages of regulatory restructuring and reform The contents of this book provide a strong theoretical base leading to a better understanding of markets pricing and deregulation by utility managers regulators and economists

financial services industry Giving the unbanked majority access to the financial services market it has attracted over 18 million subscribers which is remarkable given that fewer than 4 million people in Kenya have bank accounts This book addresses the legal and regulatory issues arising out of the introduction of M Pesa in Kenya and its drive towards financial inclusion It considers the interaction between regulation and technological innovation with a particular focus on the regulatory tools institutional arrangements and government decisional processes through the examination as a whole of its regulatory capacity This is done with a view to understanding the regulatory capacity of Kenya in addressing the vulnerabilities presented by technological innovation in the financial industry for consumers after financial inclusion It also examines the way that mobile payments have been regulated by criticising the piecemeal approach that the Central Bank of Kenya has taken in addressing the legal and regulatory issues presented by mobile payments The book argues there are significant gaps in the regulatory regime of mobile banking in Kenya

The New Investment Theory of Real Options and its Implication for Telecommunications Economics James J. Alleman, Eli M. Noam, 2007-08-19 Randall B Lowe Piper Marbury L L R The issue of costing and pricing in the telecommunications industry has been hotly debated for the last twenty years Indeed we are still wrestling today over the cost of the local exchange for access by interexchange and competitive local ex change carriers as well as for universal service funding The U S telecommunications world was a simple one before the emergence of competition comprising only AT T and independent local exchange carriers Costs were allocated between intrastate and interstate jurisdictions and then again between intrastate local and toll The Bell System then divided those costs among itself using a process referred to as the division of revenues and independents using a process called settlements Tolls subsidized local calls to keep the politi cians happy and the firm as a whole covered its costs and made a fair return State regulators however lacked the wherewithal to audit this process Their con cerns centered generally on whether local rates irrespective of costs were at a po litically acceptable level Although federal regulators were better able to determine the reasonableness of the process and the resulting costs they adopted an approach of continuous surveillance where like the state regulator the appearance of rea sonableness was what mattered With the advent of competition this historical costing predicate had to change The Bell System as well as the independents were suddenly held accountable
