*Studies in Duality on Noetherian Formal Schemes and Non-Noetherian Ordinary Schemes* Leovigildo Alonso Tarrío, Ana Jeremías López, Joseph Lipman, 1999 This volume contains three papers on the foundations of Grothendieck duality on Noetherian formal schemes and on not necessarily Noetherian ordinary schemes The first paper presents a self contained treatment for formal schemes which synthesizes several duality related topics such as local duality formal duality residue theorems dualizing complexes etc Included is an exposition of properties of torsion sheaves and of limits of coherent sheaves A second paper extends Greenlees May duality to complexes on formal schemes This theorem has important applications to Grothendieck duality The third paper outlines methods for eliminating the Noetherian hypotheses A basic role is played by Kiehl's theorem affirming conservation of pseudo coherence of complexes under proper pseudo coherent maps This work gives a detailed introduction to the subject of Grothendieck Duality The approach is unique in its presentation of a complex series of special cases that build up to the main results Local Cohomology and Its Applications Gennady

Lyubeznik, 2001-10-18 This volume collects presentations from the international workshop on local cohomology held in Guanajuato Mexico including expanded lecture notes of two minicourses on applications in equivariant topology and foundations of duality theory and chapters on finiteness properties D modules monomial ideals combinatorial analysis and related topics Featuring selected papers from renowned experts around the world Local Cohomology and Its Applications is a provocative reference for algebraists topologists and upper level undergraduate and graduate students in these disciplines

Foundations of Grothendieck Duality for Diagrams of Schemes Joseph Lipman, Mitsuyasu Hashimoto, 2009-02-05 The first part written by Joseph Lipman accessible to mid level graduate students is a full exposition of the abstract foundations of Grothendieck duality theory for schemes twisted inverse image tor independent base change in part without noetherian hypotheses and with some refinements for maps of finite tor dimension The ground is prepared by a lengthy treatment of the rich formalism of relations among the derived functors for unbounded complexes over ringed spaces of the sheaf functors tensor hom direct and inverse image Included are enhancements for quasi compact quasi separated schemes of classical results such as the projection and K neth isomorphisms In the second part written independently by Mitsuyasu Hashimoto the theory is extended to the context of diagrams of schemes This includes as a special case an equivariant theory for schemes with group actions In particular after various basic operations on sheaves such as derived direct images and inverse images are set up Grothendieck duality and flat base change for diagrams of schemes are proved Also dualizing complexes are studied in this context As an application to group actions we generalize Watanabe's theorem on the Gorenstein property of invariant subrings **Residues and Traces of Differential Forms via Hochschild Homology** Joseph Lipman, 1987

Requiring only some understanding of homological algebra and commutative ring theory this book gives those who have encountered Grothendieck residues in geometry or complex analysis an understanding of residues as well as an appreciation

of Hochschild homology      **Solving Polynomial Equations** Alicia Dickenstein, 2005-04-27 This book provides a general introduction to modern mathematical aspects in computing with multivariate polynomials and in solving algebraic systems It presents the state of the art in several symbolic numeric and symbolic numeric techniques including effective and algorithmic methods in algebraic geometry and computational algebra complexity issues and applications ranging from statistics and geometric modelling to robotics and vision Graduate students as well as researchers in related areas will find an excellent introduction to currently interesting topics These cover Groebner and border bases multivariate resultants residues primary decomposition multivariate polynomial factorization homotopy continuation complexity issues and their applications      **Triangulated Categories** Thorsten Holm, Peter Jørgensen, Raphaël Rouquier, 2010-06-24 Over the last few decades triangulated categories have become increasingly important to the extent that they can now be viewed as a unifying theory underlying major parts of modern mathematics This 2010 collection of survey articles written by leading experts covers fundamental aspects of triangulated categories as well as applications in algebraic geometry representation theory commutative algebra microlocal analysis and algebraic topology These self contained articles are a useful introduction for graduate students entering the field and a valuable reference for experts      *Notices of the American Mathematical Society* American Mathematical Society, 1987      **Queen's Papers in Pure and Applied Mathematics** Queen's University (Kingston, Ont.), 1966      American Book Publishing Record , 1987
