Groundwater Resources Gabriel Eckstein,Alice Aureli,2021-12-19 Groundwater is humanity s most vital supply of freshwater
Freshwater resources contained in aquifer systems globally are two orders of magnitude greater than those found in all
rivers lakes and other surface freshwaters combined Moreover approximately one half of the world s population today is
dependent on groundwater for its basic needs While these truisms are widely acknowledged an additional reality is now
recognized many of these subsurface freshwater reservoirs are actually transboundary formations shared amongst two or
more nations In fact around 600 transboundary aquifers have been identified worldwide They underlie the territory of nearly
every non island nation and are found in both humid and arid environments Surprisingly though only a handful of
transboundary aquifers worldwide are subject to any type of formal or informal international agreement Transboundary
groundwater resources are now receiving growing attention among the international community Questions are being raised
about how they should be managed allocated and protected what rights aquifer riparians can enjoy and what responsibilities
these aquifer states might owe to neighbouring aquifer riparians This book considers all these various aspects of the
management and regulation of transboundary groundwater resources It also presents case studies and explores recent
efforts to engage the international community on best practices and global standards for governing transboundary aquifers
As communities and nations continue to expand their reliance on these critical sources of freshwater they will have to
address such issues and develop governance regimes for these shared subsurface resources The chapters in this book were
originally published as a special issue of *Water International* **Selected Water Resources Abstracts** ,1991-03 Arctic
National Wildlife Refuge (ANWR): H.R. 39 ... H.R. 1082 ... H.R. 3601 ... H.R. 4343 United States. Congress. House.
