Resources Deprivation And Poverty:

Resources, Deprivation, and Poverty Brian Nolan, Christopher T. Whelan, 1996 Poverty alleviation is a central aim of economic and social policy and yet there is no consensus about what poverty means or how it is best measured Often the households below an income poverty line are counted as poor but there may be no firm basis for concentrating on that particular income level There may also be wide variations among the households below any income poverty line in terms of their actual living standards This book explores what poverty means in developed countries and shows that understanding and measuring it requires widening the focus beyond current income By using broader measures of resources and information on living patterns and concrete indicators of deprivation it shows how those who are effectively excluded from participation in society due to lack of resources can be more accurately identified and the processes producing such exclusion better understood The core issue of this book is how to define and measure poverty in relatively rich countries in a way which is valid meaningful in the context and valuable for policy making Extensive analysis of data from a specially designed survey of a large representative sample of Irish households is used to illustrate the arguments
