Restenosis After Intervention With New Mechanical Devices:

Restenosis after Intervention with New Mechanical Devices P.W. Serruys, B. Strauss, S.B. King III, 2012-12-06 From the Foreword by Eric J Topol In the past five years interventional cardiology has entered a new era of evaluating percutaneous transcatheter technologies to treat coronary artery disease and prevent restenosis Cardiologists attempting to follow this new and exciting field may easily be confused by the growth and expansion of new devices the technical details relevant to each device and enthusiastic claims of success This monograph is a comprehensive and objective assessment of restenosis from the perspective of these new technologies including stenting atherectomy rotational abrasion and lasers written by innovators and pioneers The international breadth of experience is reflected in the summary of experiences from both sides of the Atlantic at times with conflicting observations and results which in itself is valuable given the diverse experience to date In addition to the lucid summaries of the early and late results of these new devices important issues in the methodology of restenosis research are addressed including limitations of quantitative coronary arteriography in evaluating the new devices and important advances in alternatives to arteriography such as intravascular imaging As a whole this monograph is exceptionally worthwhile owing to its complete up to date balanced and visionary elements There is no question that the new coronary device era has ushered in some excitement and some despair This book serves a pivotal purpose by weaving so many new concepts together establishing the groundwork for further development of mechanical approaches to limit restenosis I heartily recommend this text to all interventional cardiologists interested in practical and research aspects of restenosis *Current Review of Interventional Cardiology* David R. Holmes, Patrick W. Serruys, 1997 Updated yearly this resource brings you the most current information available on clinical applications new techniques and procedures in the rapidly changing field of interventional cardiology It is profusely illustrated with two colour line drawings tables and algorithms to make this cutting edge information accessible at a glance for even the busiest clinician Each of the topics is given expert assessment by the world's leading authorities **National Library of Medicine Current Catalog** National Library of Medicine (U.S.), 1992 *Progress in Catheter Ablation* Liong Bing Liem, Eugene Downar, 2013-11-11 Catheter ablation is widely accepted as an effective and safe form of therapy for cardiac arrhythmia In many instances this curative procedure is considered as the first line of therapy if not the ultimate treatment of choice With the use of radiofrequency RF modality which has revolutionized the technology from a barotraumatic potentially injurious procedure using high voltage direct current DC shock to a safe and relatively painless one catheter ablation procedure now carries a very low risk and is extremely effective for certain types of arrhythmia Its efficacy rate in curing supraventricular tachycardia involving an accessory pathway or dual atrioventricular nodal pathways has been near perfect and its application for certain types of atrial and ventricular arrhythmia have also been very satisfactory However conventional RF ablation has several well known limitations most notably is its ability to only produce relatively small point lesions rendering it effective only for an

arrhythmia with a small and or a superficial target It was soon recognized that the technology would not likely to have significant utility in arrhythmia with a more widespread target such as atrial fibrillation or those which involve scarred and deep myocardial tissue such as ventricular tachycardia Indeed the application of conventional RF technology in these complex but common arrhythmia has yielded unsatisfactory results Imaging and Intervention in Cardiology C.A. Nienaber,Udo P. Sechtem,2012-12-06 The aim of this work is to give clinicians and interventionalists an overview of the use of cardiac imaging techniques in combination with modern interventional procedures such as thrombolysis catheter based coronary revascularization valvuloplasty and interventions in congenital heart disease *Myocardial Viability* A.E. Iskandrian,Ernst E. van der Wall,2012-12-06 AMI E ISKANDRIAN we appreciate their commitments and contributions Almost all chapters have been radically modified Chapter 1 deals with pathophysiology of myocardial hibernation and stunning Chapter 2 with apoptosis Chapter 3 with the role of positron emission tomography Chapters 4 and 5 with the role of single photon emission computed tomography with thallium 201 and technetium agents respectively Chapter 6 with the role of SPECT fatty acid imaging Chapter 7 with the role of SPECT FDG imaging Chapter 8 with the role of cardiac catheterization angiography Chapter 9 with the role of echocardiography Chapter 10 with the role of magnetic resonance imaging and Chapter 11 with clinical applications Finally Chapter 12 provides a short summary *Surgical Options for the Treatment of Heart Failure* R. Masters,2007-12-14 Despite the significant decline in heart disease mortality rates over the last 25 years heart failure has remained a significant problem We are now confronted with large numbers of terminally ill patients for whom conventional therapies for heart failure have been exhausted and for whom repeated hospital visits are necessary There now is a major thrust towards a management strategy which embraces a comprehensive approach including vigorous preventive measures and earlier surgical interventions This book outlines the major surgical options for the treatment of heart failure and brings together a very broad base of opinions with contributions from several outstanding individuals With the improved knowledge and techniques to control rejection transplantation has become the central pillar in the surgical management of this group of patients Unfortunately because of limited donor supply the technique cannot be applied to large numbers of patients A great deal of excitement however exists in the potential for xenotransplantation as a supplement to homotransplantation The use of cardiac assist devices has become a reality with several hundred LVADS and BiVADS implanted throughout the world and cardiac replacement with total artificial hearts continues to be used successfully as a bridge to transplantation We are on the threshold of the broad application of assist devices to provide prolonged relief of heart failure and restore patients to an ambulatory home environment and hopefully return to the work force in significant numbers Diagnosis and Treatment of Aortic Diseases C.A. Nienaber,R. Fattori,2012-12-06 This book is an up to date summary of all aspects of aortic disease written by international experts in their fields covering diagnostic concepts of all aortic diseases the most modern therapeutic approaches in various aortic syndromes the pathogenic origin and the most

recent molecular and cellular findings that have revolutionized our present knowledge of aortic diseases The reader will come to understand the aorta as a functional organ with a complex regulatory system rather than just a major arterial vessel and will have a better understanding of the prognostic impact of various aortic syndromes and of the most recent therapeutic concepts for chronic as well as acute aortic pathology As a unique feature of this book the aorta is placed in the center of systemic illnesses such as atherosclerosis diabetes hypertension infectious diseases and connective tissue disorders storage diseases trauma and toxic factors this concept aims to attract the attention of both clinical specialties such as cardiology radiology and cardiovascular surgery and adjacent areas like pathology and clinical genetics The book portrays the aorta as an integral part of the cardiovascular system and the entire organism and features the complexity and clinical impact of all major aortic diseases

Myocardial Damage Juan Carlos Kaski, David W. Holt, 2013-03-09 The spectrum of unstable coronary syndromes has been the object of steadily increasing research particularly in respect of novel diagnostic and treatment modalities Although the WHO criteria for the diagnosis of acute myocardial infarction have been known for decades there is still much debate as to the proper use of these especially the handling of biochemical markers Traditional enzymes have limitations in diagnostic power and new markers have unclarified applicability with regard to standardisation of assays and decision limits Furthermore the growing understanding of the conception of minimal myocardial damage in the borderzone between unstable angina pectoris and myocardial infarction necessitates refinement in the definitions of the various entities within the kaleidoscope of acute myocardial ischaemia There has been a strong impetus within the European Society of Cardiology to present this subject to a broad audience of cardiologists and as a consequence the theme of biochemical markers has become an important constituent of the Education and Training Programmes of the Society This book has fundamental implications for the overall comprehension of this complex area This book on myocardial damage compiled by international experts will truly appeal to the basic scientist as well as the clinician searching for updated knowledge of the pathophysiology and risk stratification of unstable coronary syndromes

Advances in Noninvasive Electrocardiographic Monitoring Techniques Hans-Heinrich Osterhues, Vinzenz Hombach, Arthur J. Moss, 2000-02-29 An outgrowth of the Biennial International Congress on Holter and Noninvasive Electrocardiology held in Ulm Germany in May 1998 The 46 papers provide a snapshot of the field at the end of the century for clinical cardiologists and internists who use electrocardiographic procedures in managing their patients researchers actively involved in the field and students who will be working in it They cover physiology and pathophysiology from genes and phenotypes to the autonomic nervous system aspects investigated by different methods such as P wave and QRS and T wave alternans repolarization ischemic heart disease ambulatory blood pressure monitoring and other methods and non linear dynamics and newer signal detection and analysis techniques

Grossman & Baim's Handbook of Cardiac Catheterization, Angiography, and Intervention Mauro Moscucci, Marc D. Feldman, 2023-08-29 An easily accessible ready reference for the entire cardiac team Grossman

Baim's Handbook of Cardiac Catheterization Angiography and Intervention is an essential resource in today's cardiac catheterization lab. This practical handbook edited by Dr. Mauro Moscucci with contributions from associate editor Marc D. Feldman follows the bestselling text Grossman Baim's Cardiac Catheterization Angiography and Intervention providing fast convenient access to authoritative information in a portable handbook format. **Cardiac Catheterization, Angiography, and Intervention** Donald S. Baim, William Grossman, 1996

Grossman & Baim's Cardiac Catheterization, Angiography, and Intervention Mauro Moscucci, 2013-10-05 Grossman Baim's Cardiac Catheterization Angiography and Intervention 8e is the premier reference on cardiac catheterization and appeals to seasoned practitioners residents and cardiology fellows. This title reflects the rapid evolution and growing clinical use of hemodynamic data and of imaging and interventional techniques. **Heart Hypertrophy and Failure** Naranjan S. Dhalla, Grant N. Pierce, Vincenzo Panagia, Robert E. Beamish, 2012-12-06 Heart Hypertrophy and Failure brings together leading basic scientists and clinicians presenting improved knowledge of the pathophysiology and treatment of the condition. The result is a synthesis of state of the art information on molecular biology cellular physiology and structure function relationships in the cardiovascular system in health and disease. The papers presented describe fundamental mechanisms underlying changes in the cellular machinery during the development of cardiac hypertrophy and heart failure. Audience: Students, scientists, clinical and experimental cardiologists who seek to understand and manage the perplexing problems of hypertrophy and heart failure. The Modern Era of Coronary Thrombolysis Richard C. Becker, 2012-12-06 Coronary heart disease remains the leading cause of death for men and women in the United States and other industrialized nations. Acute myocardial infarction accounts for a majority of these deaths approaching 750,000 yearly. Thrombolytic therapy has revolutionized the treatment of myocardial infarction saving lives to a greater extent than any treatment developed to date. The identification of patients best suited for thrombolytic therapy has been a challenging task as has the ideal adjuvant strategy. Further the noninvasive diagnosis of treatment successes and failures as well as the expeditious triaging of patients requiring mechanical surgical revascularization have been difficult to define but progress has been made recently. The emergence of information vital for patient care has appeared at an extraordinary pace with hundreds of articles being published yearly. Unfortunately a resource devoted to the area of thrombolysis does not exist making the dissemination of information to physicians, scientists and health care providers problematic. The Modern Era of Coronary Thrombolysis is designed to bring the medical and scientific communities up to date. It will serve as a foundation for future investigation as well as a resource which can be referred to for many years to come. **Mechanisms of Heart Failure** Pawan K. Singal, Ian M.C. Dixon, Robert E. Beamish, Naranjan S. Dhalla, 2012-12-06 Mechanisms of Heart Failure is based on papers selected from poster presentations made at the International Conference on Heart Failure Winnipeg May 20-23 1994. Although the entire book is one continuous discussion of subcellular mechanisms of heart failure and its treatment the presentation has been divided into three sections: the

opening section on the subcellular basis of heart failure includes discussions of cytokines signal transduction metabolism extracellular matrix organ level changes and newer approaches to understanding the pathogenesis of heart failure The second section focuses on the pathophysiological aspects of cardiomyopathies and their treatment In the final section medical surgical and pharmacological approaches to the treatment of heart failure are discussed in clinical and animal laboratory settings

Molecular Cardiology for the Cardiologists Bernard Swynghedauw, 2012-12-06 Molecular Cardiology for the Cardiologist provides a short easily readable summary of what the new biology brings to cardiology With this in mind special efforts have been made to present many comprehensive schemes and drawings as well as teaching tables The five parts of the book provide a general introduction to the new language of biology the normal structure of the heart and blood vessels the pathophysiology and the new therapeutic avenues that have been opened up by the new biology A concise summary of the keys that assist the cardiologist or student who seeks to learn and read more about this field Provides practical examples to illustrate the clinical interest of the new approach

Lipid-Lowering Therapy and Progression of Coronary Atherosclerosis A.V. Bruschke, Johan H. C. Reiber, K.J. Lie, Hein J.J. Wellens, 2012-12-06 A unique overview of all major angiographic lipid intervention trials presented by their principal investigators Basic mechanisms and methodological aspects including biochemical as well as angiographic aspects are discussed by experts in these fields A careful comparison of all available data permits an analysis to be made of what may currently be considered proved which aspects merit further investigation and which hypotheses should be rejected Audience Clinicians involved in the practice of lipid lowering and investigators involved in lipid lowering clinical

trials Scientists involved in other areas of lipid research and investigators conducting coronary angiographic trials designed to study the influence of different interventions will find a wealth of information and practical guidelines in this book

What's New in Cardiovascular Imaging? Johan H. C. Reiber, Ernst E. van der Wall, 2012-12-06 What's New in Cardiovascular Imaging is a bibliographical image of a Symposium held June 22-24 1998 in Leiden the Netherlands At this Symposium all the major advances in cardiovascular imaging in all the cardiovascular imaging modalities X ray intravascular ultrasound magnetic resonance scintigraphy and CT were addressed by the leading authorities in this field Based on the presentations of the invited Faculty this book consists of a compilation of manuscripts related to most of the topics discussed at this particular meeting We express our gratitude to all authors and coauthors for having made great efforts in preparing their superb up to date chapters under a great time pressure so that this book was available at the time of the Symposium The authors are all excellent investigators in one or more fields of cardiovascular imaging and they have stimulated progress in cardiovascular imaging with the aim to improve patient care and clinical research This book consists of a total of 32 chapters subdivided into seven Parts Each part describes a particular field in cardiovascular imaging These Parts are Coronary quantitation by QCA and intracoronary ultrasound QCU angiographic trials progress in intravascular ultrasound magnetic resonance MR coronary and vascular imaging nuclear cardiovascular imaging echocardiography and cine and spiral CT coronary imaging In general each Part begins with a chapter that provides a broad overview of the advances in the field described in that particular Part as well as a view towards the future
