Vulnerability and Care Andrew Sloane, 2016-01-28 Medical and bioethical issues have spawned a great deal of debate in both public and academic contexts Little has been done however to engage with the underlying issues of the nature of medicine and its role in human community This book seeks to fill that gap by providing Christian philosophical and theological reflections on the nature and purposes of medicine and its role in a Christian understanding of human society The book provides two main doorways into a Christian philosophical theology of medicine First it presents a brief description of the contexts in which medicine is practiced in the early 21st century identifying key problems and challenges that medicine must address It then turns to issues in contemporary bioethics demonstrating how the debate is rooted in conflicting visions of the nature of medicine and so human existence This leads to a discussion of some of the philosophical and theological resources currently available for those who would reflect Christianly on medicine The heart of the book consists of an articulation of a Christian understanding of medicine as both a scholarly and a social practice articulating the philosophical theological framework which informs this perspective It fleshes out features of medicine as an inherently moral practice one informed by a Christian social vision and shaped by key theological commitments The book closes by returning to the issues relating to the context of medicine and bioethics with which it opened demonstrating how a Christian philosophical theology of medicine informs and enriches those discussions

Economics Gavin Mooney, 2009-01-22 This book mounts a critique of current health economics and provides a better way of looking at the economics of health and health care It argues that health economics has been too dominated by the economics of health care and has largely ignored the impact of poverty inequality poor housing and lack of education on health It is suggested that some of the structural issues of economies particularly the individualism of neo liberalism which is becoming more and more pervasive across the globe need to be addressed in health economics The author instead proposes a form of collective decision making through communitarianism placing value on participation in public life and on institutions such as health care It is envisaged this form of decision making can be used at the local national or global levels For the last this would mean a major revamp of global institutions like the World Bank and the IMF Examples of the impact of the new paradigm on health policy in general but also more specifically on priority setting and equity are included Handbook of
