Richardson, Vivian Cody, 2009-08-09 Since its first description in 1942 in both serum and cerebrospinal fluid transthyretin TTR has had an eventful history including changes in name from prealbumin to thyroxine binding prealbumin to transthyretin as knowledge increased about its functions TTR is synthesised in a wide range of tissues in humans and other eutherian mammals the liver choroid plexus blood cerebrospinal fluid barrier retinal pigment epithelium of the eye pancreas intestine and meninges However its sites of synthesis are more restricted in other vertebrates This implies that the number of tissues synthesising TTR during vertebrate evolution has increased and raises questions about the selection pressures governing TTR synthesis TTR is most widely known as a distributor of thyroid hormones In addition TTR binds retinol binding protein which binds retinol In this way TTR is also involved with retinoid distribution More recently TTR has been demonstrated to bind a wide variety of endocrine disruptors including drugs pollutants industrial compounds heavy metals and some naturally occurring plant flavonoids These not only interfere with thyroid hormone delivery in the body but also transport such endocrine disruptors into the brain where they have the potential to accumulate

Mathematical Modeling in Experimental Nutrition: Vitamins, Proteins, Methods ,1996-12-02 This book developed from a series of conferences to facilitate the application of mathematical modeling to experimental nutrition As nutrition science moves from prevention of gross deficiencies to identifying requirements for optimum long term health more sophisticated methods of nutritional assessment will be needed Collection and evaluation of kinetic data may be one such method This books opens with chapters giving specific examples of the application of modeling techniques to vitamin A carotenoids folate vitamin b 6 glycogen phosphorylase transthyretin amino acids and energy metabolism Obtaining kinetic data on internal processes is a major challenge therefore the text includes chapters on the use of microdialysis and ultrafiltration use of membrane vesicles and culture of mammary tissue Many of the authors use the Simulation Analysis and Modeling program which allows compartmental models to be described without specifying the required differential equations The final sections of the book however present some more mathematical descriptions of physiological processes including bioperiodicity metabolic control

and membrane transport discussions of some computational aspects of modeling such as parameter distributions linear integrators and identifiability and alternative mathematical approaches such as neural networks and graph theory Specific detailed examples of applications of modeling to vitamins proteins amino acids and energy metabolism Novel methods for collecting kinetic data microdialysis ultrafiltration membrane vesicles and the culture of mammary tissue Mathematical treatment of complex metabolic processes including bioperiodicity metabolic control and membrane transport Computational approaches to distribution of kinetic parameters evaluation of linear integrators and identifiability Alternative mathematical approaches neural networks and graph theory Detailed descriptions of the application of modeling to a variety of nutrients
