Managing Information Security James T. Harmening,2013-08-21 Today when most companies and government agencies rely on computer networks to store and manage their organizations data it is essential that measures are put in place to secure those networks and keep them functioning optimally Network administrators need to define their security management systems to cover all parts of their computer and network resources With a plethora of storage devices including iPads Android Tablets USB drives watches televisions Digital Video Recorders smart phones apple T V appliances Xbox s and household appliances the management becomes even more difficult This chapter focuses on security management systems Which are sets of policies put place by an organization to maintain the security of their computer and network resources These policies are based on the types of resources that need to be secured and they depend on the organization Some groups of policies can be applied to entire industries others are specific to an individual organization A security management system starts as a set of policies that dictate the way in which computer resources can be used The policies are then implemented by the organization s technical departments and enforced This can be easy for smaller organizations but can require a team for larger international organizations that have thousands of business processes Either way measures need to be put in place to prevent respond to and fix security issues that arise in an organization Standards that were in place ten years ago may not be adequate for current business practices As an example a strong password may have included less than 8 characters while modern computers can easily break the password utilizing brute force or rainbow table methods

Information Security Management Systems Heru Susanto,Mohammad Nabil Almunawar, This new volume Information Security Management Systems A Novel Framework and Software as a Tool for

Compliance with Information Security Standard looks at information security management system standards risk management associated with information security and information security awareness within an organization. The authors aim to improve the overall ability of organizations to participate, forecast and actively assess their information security circumstances. It is important to note that securing and keeping information from parties who do not have authorization to access such information is an extremely important issue. To address this issue, it is essential for an organization to implement an ISMS standard such as ISO 27001 to address the issue comprehensively. The authors of this new volume have constructed a novel security framework ISF and subsequently used this framework to develop software called Integrated Solution Modeling ISM, a semi-automated system that will greatly help organizations comply with ISO 27001 faster and cheaper than other existing methods. In addition, ISM does not only help organizations to assess their information security compliance with ISO 27001 but it can also be used as a monitoring tool helping organizations monitor the security statuses of their information resources as well as monitor potential threats. ISM is developed to provide solutions to solve obstacles, difficulties and expected challenges associated with literacy and governance of ISO 27001. It also functions to assess the RISC level of organizations towards compliance with ISO 27001. The information provided here will act as blueprints for managing information security within business organizations. It will allow users to compare and benchmark their own processes and practices against these results shown and come up with new critical insights to aid them in information security standard ISO 27001 adoption.
