

Semantics-Directed Compiler Generation*

Michael J A Smith, University of Cambridge
<msmith@lanther.co.uk>

July 21, 2005

Abstract

This dissertation concerns the design and implementation of SEMCOM, an interpreter generator for arbitrary languages, which compiles a two-level operational semantics (in either big- or small-step style). Input to SEMCOM is expressed in a purpose-designed Semantic Description Language (SDL). An SDL file contains the definition of an evaluation and typing relation, and can express type systems up to polymorphism. The SEMCOM compiler performs a sequence of analyses on this input, and generates a lexer, parser, and interpreter (in both OCaml and F#) for the user's language. SDL itself is typed, and a number of consistency checks are performed, producing comprehensive debugging output and useful error messages. Non-deterministic semantics are supported.

1 Introduction

In essence, computation has always been concerned with automation, and this takes place at many different levels. Rather than building systems directly in hardware, we have a processor that provides a convenient *abstraction* – that is to say, we can concern ourselves with the movement and processing of binary data, rather than the control of electrical signals. Furthermore, we do not write general purpose programs in assembler, but use an *abstracted* language in which we can talk about more meaningful concepts, such as objects, functions, and so forth.

The concept of abstraction does not end here, however. A programming language is not just a shorthand for sequences of assembler instructions – it has an underlying meaning, which is in some sense separate from the implementation. Over the course of time, our concept of the *semantics* of a language has developed, so that we now have an underlying mathematical framework with which to describe the execution of a program. In particular, an *operational* semantics is a specification of an abstract machine (an inductively defined transition relation), that explains the execution of a program as a sequence of syntactic transformations. Given this formal description of a programming language, is it not natural to ask whether a compiler could be generated automatically?

This is not as far-fetched as it sounds. Consider the humble parser. Before the theory of formal context-free grammars was understood, the programmer had to code their lexing and parsing routines by hand. Now, we have tools such as yacc, which will generate an efficient parser from a BNF-style description of a grammar. Although this is a considerably more constrained problem than the one just posed, it shows that useful tools can arise from the

*In this document, the term *compiler generator* is used to refer more generally to the automated generation of compilers, interpreters and abstract machines.

Semantics Directed Compiler Generation

Mads Tofte

Semantics Directed Compiler Generation:

Semantics-Directed Compiler Generation N. D. Jones, 2014-01-15 **Semantics-Directed Compiler Generation**,
Semantics-directed Compiler Generation Neil D. Jones, 1980 Partial Evaluation and Automatic Program
Generation Neil D. Jones, Carsten K. Gomard, Peter Sestoft, 1993 Partial evaluation reconciles generality with efficiency by
providing automatic specialization and optimization of programs This book covers the entire field of partial evaluation
provides simple and complete algorithms and demonstrates that specialization can increase efficiency **Compiler**
Generators Mads Tofte, 2012-12-06 The Origin of this monograph is a course entitled Semantics directed Compiler
Generation which Professor Neil D Jones gave in 1982 at Copenhagen University where I was a student at the time In this
course he described a compiler generator called CERES which he was developing I immediately felt attracted to the unusual
combination of mathematical reasoning about compilers and the small intricate building blocks that made up the running
system As I came to understand the system I discovered that within the existing mathematical framework one could express
compiler generation as a special case of compilation this led to a specification of a compiler generator which was
bootstrapped on itself resulting in a machine generated compiler generator The purpose of this monograph is to describe the
CERES system we produced in 1983 84 and compare it with other systems including more recent ones Also it is as relevant
today as it was then to discuss the role of compiler generators as an aid in the design and implementation of programming
languages this I do in Chap 5 This monograph is a strongly revised version of the candidate Semantics and Algebraic
Specification Jens Palsberg, 2009-09-19 This Festschrift volume published to honor Peter D Mosses on the occasion of his
60th birthday includes 17 invited chapters by many of Peter's coauthors collaborators close colleagues and former students
Peter D Mosses is known for his many contributions in the area of formal program semantics In particular he developed
action semantics a combination of denotational operational and algebraic semantics The presentations given on a symposium
in his honor in Udine Italy on September 10 2009 were on subjects related to Peter's many technical contributions and they
were a tribute to his lasting impact on the field Topics addressed by the papers are action semantics security policy design
colored petri nets order sorted parameterization and induction object oriented action semantics structural operational
semantics model transformations the scheme programming language type checking action algebras and denotational
semantics **Mathematical Foundations of Programming Language Semantics** Michael Main, Austin Melton, Michael
Mislove, David Schmidt, 1988-03-09 This volume is the proceedings of the 3rd Workshop on the Mathematical Foundations of
Programming Language Semantics held at Tulane University New Orleans Louisiana April 8 10 1987 The 1st Workshop was
at Kansas State University Manhattan Kansas in April 1985 see LNCS 239 and the 2nd Workshop with a limited number of
participants was at Kansas State in April 1986 It was the intention of the organizers that the 3rd Workshop survey as many
areas of the Mathematical Foundations of Programming Language Semantics as reasonably possible The Workshop attracted

49 submitted papers from which 28 papers were chosen for presentation. The papers ranged in subject from category theory and Lambda calculus to the structure theory of domains and power domains to implementation issues surrounding semantics.

Conference Record of the Eighteenth Annual ACM Symposium on Principles of Programming Languages, 1991

Methods and Tools for Compiler Construction B. Lorho, 1984. For a long time compiler construction was considered an operation to be carried out by only a few skilled specialists. However, over the past decade numerous theoretical advances have led to a methodology of compiler writing as well as to tools for automatic and semi-automatic compiler construction. This book is the result of an advanced course sponsored by the Commission of the European Communities and the Institut National de Recherche en Informatique et en Automatique. The course *Methods and Tools for Compiler Construction* was held in Rocquencourt in December 1983. The volume places its emphasis on specific areas where significant improvements have been made, including attribute grammars, compilation from semantic definitions, code generation and optimization, and Ada compiling.

Programming Language Implementation and Logic Programming Jan Małuszyński, Martin Wirsing, 1991-08-14. This volume contains the papers which have been accepted for presentation at the Third International Symposium on Programming Language Implementation and Logic Programming PLILP 91 held in Passau, Germany, August 26-28, 1991. The aim of the symposium was to explore new declarative concepts, methods and techniques relevant for the implementation of all kinds of programming languages, whether algorithmic or declarative ones. The intention was to gather researchers from the fields of algorithmic programming languages as well as logic functional and object-oriented programming. This volume contains the two invited talks given at the symposium by H. Ait Kaci and D. B. MacQueen. 32 selected papers and abstracts of several system demonstrations. The proceedings of PLILP 88 and PLILP 90 are available as Lecture Notes in Computer Science Volumes 348 and 456.

Algol-like Languages Peter O'Hearn, Robert Tennent, 2013-03-14. To construct a compiler for a modern higher-level programming language, one needs to structure the translation to a machine-like intermediate language in a way that reflects the semantics of the language. Little is said about such structuring in compiler texts that are intended to cover a wide variety of programming languages. More is said in the literature on semantics-directed compiler construction, but here too the viewpoint is very general, though limited to languages with a finite number of syntactic types. On the other hand, there is a considerable body of work using the continuation-passing transformation to structure compilers for the specific case of call-by-value languages such as SCHEME and ML. In this paper, we will describe a method of structuring the translation of ALGOL-like languages that is based on the functor category semantics developed by Reynolds and Oles. An alternative approach using category theory to structure compilers is the early work of F. L. Morris, which anticipates our treatment of boolean expressions but does not deal with procedures. Types and Syntax. An ALGOL-like language is a typed lambda calculus with an unusual repertoire of primitive types. Throughout most of this paper, we assume that the primitive types are commutative and integer expressions.

acc eptor int eger var iable I and that the set 8 of types is the least set containing these primitive types and closed under the binary operation

Functional Programming Languages and Computer Architecture John Hughes, 1991-08-07 This book offers a comprehensive view of the best and the latest work in functional programming It is the proceedings of a major international conference and contains 30 papers selected from 126 submitted A number of themes emerge One is a growing interest in types powerful type systems or type checkers supporting overloading coercion dynamic types and incremental inference linear types to optimize storage and polymorphic types to optimize semantic analysis The hot topic of partial evaluation is well represented techniques for higher order binding time analysis assuring termination of partial evaluation and improving the residual programs a partial evaluator generates The thorny problem of manipulating state in functional languages is addressed one paper even argues that parallel programs with side effects can be more declarative than purely functional ones Theoretical work covers a new model of types based on projections parametricity a connection between strictness analysis and logic and a discussion of efficient implementations of the lambda calculus The connection with computer architecture and a variety of other topics are also addressed

Attribute Grammars Pierre Deransart, Martin Jourdan, Bernard Lorho, 1988-08-10 This book treats the problem of formulating models in mathematical programming and thereafter solving the resulting model Particular emphasis is placed on the interaction between the two The topic is viewed from different angles namely linear programming Walter Murray integer programming Ellis Johnson network flows John Mulvey and stochastic programming Roger J B Wets The book will be very useful for any mathematics programmer or operations researcher who works in the field of real world modelling The book is an important part of any university course in modelling particularly in operations research economics and business The book also contains an article on the origins of mathematical programming Alexander Rinnooy Kan This is important reading for anyone interested in the history of the field

Formal Methods: State of the Art and New Directions Paul Boca, Jonathan P. Bowen, Jawed Siddiqi, 2009-12-04 Through fundamental contributions from leading researchers this volume describes the use of formal modeling methods in the areas of requirements design and validation The self contained chapters provide readers with rich background information and a diverse breadth of specialist material

Semantic Methods for Knowledge Management and Communication Radosław Katarzyniak Katarzyniak, Tzu-Fu Chiu, Chao-Fu Hong, Ngoc-Thanh Nguyen, 2011-08-04 The book consists of 31 chapters in which the authors deal with multiple aspects of modeling utilization and implementation of semantic methods for knowledge management and communication in the context of human centered computing It is assumed that the modern human centered computing requires the intensive application of these methods as well as effective integration with multiple techniques of computational collective intelligence The book is organized in four parts devoted to the presentation of utilization of knowledge processing in agent and multiagent systems application of computational collective intelligence to knowledge management models for collectives of intelligent agents and models and environments tailored directly to human centered

computing All chapters in the book discuss theoretical and practical issues related to various models and aspects of computational techniques for semantic methods which are currently studied and developed in many academic and industry centers over the world The editors hope that the book can be useful for graduate and PhD students of computer science as well as for mature academics researchers and practitioners interested in developing of modern methods for representation processing and distribution of knowledge in the context of human centered computing and by means of computer based information systems It is the hope of the editors that readers of this volume can find in all chosen chapters many inspiring ideas and influential practical examples as well as use them in their current and future work *Intelligent Agents* Michael J. Wooldridge, 1995-01-26 This volume coherently present 24 thoroughly revised full papers accepted for the ECAI 94 Workshop on Agent Theories Architectures and Languages There is currently considerable interest from both the AI and the mainstream CS communities in conceptualizing and building complex computer systems as collections of intelligent agents This book is devoted to theoretical and practical aspects of architectural and language related design and implementation issues of software agents Particularly interesting is the comprehensive survey by the volume editors which outlines the key issues and indicates via a comprehensive bibliography topics for further reading In addition a glossary of key terms in this emerging field and a comprehensive subject index is included *Formalization of Programming Concepts* J. Diaz, I. Ramos, 1981-04 **Compiler Construction** Uwe Kastens, Peter Pfahler, 1992-09-23 The International Workshop on Compiler Construction provides a forum for the presentation and discussion of recent developments in the area of compiler construction Its scope ranges from compilation methods and tools to implementation techniques for specific requirements of languages and target architectures This volume contains the papers selected for presentation at the 4th International Workshop on Compiler Construction CC 92 held in Paderborn Germany October 5 7 1992 The papers present recent developments on such topics as structural and semantic analysis code generation and optimization and compilation for parallel architectures and for functional logical and application languages *Programming Logics* Andrei Voronkov, Christoph Weidenbach, 2013-04-05 This Festschrift volume published in memory of Harald Ganzinger contains 17 papers from colleagues all over the world and covers all the fields to which Harald Ganzinger dedicated his work during his academic career The volume begins with a complete account of Harald Ganzinger s work and then turns its focus to the research of his former colleagues students and friends who pay tribute to him through their writing Their individual papers span a broad range of topics including programming language semantics analysis and verification first order and higher order theorem proving unification theory non classical logics reasoning modulo theories and applications of automated reasoning in biology **Compiler Compilers and High Speed Compilation** Dieter Hammer, 1989 Advances and problems in the field of compiler compilers are the subject of the 2nd CCHSC Workshop which took place in Berlin GDR in October 1988 The 18 papers which were selected for the workshop are now included in this volume among them three invited papers

They discuss the requirements properties and theoretical aspects of compiler compilers as well as tools and metatools for software engineering The papers cover a wide spectrum in the field of compiler compilers ranging from overviews of existing compiler compilers and engineering of compiler compilers to special problems of attribute evaluation generation and code generation In connection with compiler compiler projects means of supporting high speed compilation are pointed out Special attention is given to problems of incremental compilation

Thank you certainly much for downloading **Semantics Directed Compiler Generation**. Maybe you have knowledge that, people have see numerous period for their favorite books subsequently this Semantics Directed Compiler Generation, but stop going on in harmful downloads.

Rather than enjoying a fine book similar to a cup of coffee in the afternoon, otherwise they juggled later some harmful virus inside their computer. **Semantics Directed Compiler Generation** is within reach in our digital library an online right of entry to it is set as public appropriately you can download it instantly. Our digital library saves in multiple countries, allowing you to acquire the most less latency time to download any of our books with this one. Merely said, the Semantics Directed Compiler Generation is universally compatible bearing in mind any devices to read.

Semantics Directed Compiler Generation Introduction

Semantics Directed Compiler Generation Offers over 60,000 free eBooks, including many classics that are in the public domain. Open Library: Provides access to over 1 million free eBooks, including classic literature and contemporary works. Semantics Directed Compiler Generation Offers a vast collection of books, some of which are available for free as PDF downloads, particularly older books in the public domain. Semantics Directed Compiler Generation : This website hosts a vast collection of scientific articles, books, and textbooks. While it operates in a legal gray area due to copyright issues, its a popular resource for finding various publications. Internet Archive for Semantics Directed Compiler Generation : Has an extensive collection of digital content, including books, articles, videos, and more. It has a massive library of free downloadable books. Free-eBooks Semantics Directed Compiler Generation Offers a diverse range of free eBooks across various genres. Semantics Directed Compiler Generation Focuses mainly on educational books, textbooks, and business books. It offers free PDF downloads for educational purposes. Semantics Directed Compiler Generation Provides a large selection of free eBooks in different genres, which are available for download in various formats, including PDF. Finding specific Semantics Directed Compiler Generation, especially related to Semantics Directed Compiler Generation, might be challenging as theyre often artistic creations rather than practical blueprints. However, you can explore the following steps to search for or create your own Online Searches: Look for websites, forums, or blogs dedicated to Semantics Directed Compiler Generation, Sometimes enthusiasts share their designs or concepts in PDF format. Books and Magazines Some Semantics Directed Compiler Generation books or magazines might include. Look for these in online stores or libraries. Remember that while Semantics Directed Compiler Generation, sharing copyrighted material without permission is not legal. Always ensure youre either creating your own or obtaining them from legitimate sources that allow sharing and downloading. Library Check if your local library offers eBook lending services. Many libraries have digital catalogs where you can borrow Semantics Directed Compiler Generation eBooks for free, including popular titles. Online Retailers: Websites like Amazon, Google Books, or Apple Books often sell eBooks. Sometimes, authors or publishers offer promotions or free periods for

certain books. Authors Website Occasionally, authors provide excerpts or short stories for free on their websites. While this might not be the Semantics Directed Compiler Generation full book, it can give you a taste of the authors writing style. Subscription Services Platforms like Kindle Unlimited or Scribd offer subscription-based access to a wide range of Semantics Directed Compiler Generation eBooks, including some popular titles.

FAQs About Semantics Directed Compiler Generation Books

How do I know which eBook platform is the best for me? Finding the best eBook platform depends on your reading preferences and device compatibility. Research different platforms, read user reviews, and explore their features before making a choice. Are free eBooks of good quality? Yes, many reputable platforms offer high-quality free eBooks, including classics and public domain works. However, make sure to verify the source to ensure the eBook credibility. Can I read eBooks without an eReader? Absolutely! Most eBook platforms offer web-based readers or mobile apps that allow you to read eBooks on your computer, tablet, or smartphone. How do I avoid digital eye strain while reading eBooks? To prevent digital eye strain, take regular breaks, adjust the font size and background color, and ensure proper lighting while reading eBooks. What the advantage of interactive eBooks? Interactive eBooks incorporate multimedia elements, quizzes, and activities, enhancing the reader engagement and providing a more immersive learning experience. Semantics Directed Compiler Generation is one of the best book in our library for free trial. We provide copy of Semantics Directed Compiler Generation in digital format, so the resources that you find are reliable. There are also many Ebooks of related with Semantics Directed Compiler Generation. Where to download Semantics Directed Compiler Generation online for free? Are you looking for Semantics Directed Compiler Generation PDF? This is definitely going to save you time and cash in something you should think about.
