Smith, Karlson Hargroves, Cheryl Desha, 2013-01-11 Whole System Design is increasingly being seen as one of the most cost effective ways to both increase the productivity and reduce the negative environmental impacts of an engineered system A focus on design is critical as the output from this stage of the project locks in most of the economic and environmental performance of the designed system throughout its life which can span from a few years to many decades Indeed it is now widely acknowledged that all designers particularly engineers architects and industrial designers need to be able to understand and implement a whole system design approach This book provides a clear design methodology based on leading efforts in the field and is supported by worked examples that demonstrate how advances in energy materials and water productivity can be achieved through applying an integrated approach to sustainable engineering Chapters 1 5 outline the approach and explain how it can be implemented to enhance the established Systems Engineering framework Chapters 6 10 demonstrate through detailed worked examples the application of the approach to industrial pumping systems passenger vehicles electronics and computer systems temperature control of buildings and domestic water systems Published with The Natural Edge Project the World Federation of Engineering Organizations UNESCO and the Australian Government The Future of Thermal Comfort in an Energy- Constrained World Tim Law, 2013-04-19 The dissertation investigates the scientific and business factors that have resulted in air conditioning being a major contributor to climate change With his architectural background the author demonstrates how a design methodology not commonly adopted in scientific studies may actually be a suitable way of dealing with a complex problem the business as usual scenario involving building science sociological values

and consumer behavior Using his innovations as case studies the author shows how good ideas cannot be evaluated on scientific merit alone and demonstrates why commercialization may have a pivotal role in deployment of research based technology He advances the theory of personalized thermal comfort which can potentially resolve the air conditioning conundrum
