Singular Integrals And Differentiability Properties Of Functions Pms 3:

Theorems of the 21st Century Bogdan Grechuk, 2019-06-15 This book consists of short descriptions of 106 mathematical theorems which belong to the great achievements of 21st century mathematics but require relatively little mathematical background to understand their formulation and appreciate their importance The selected theorems of this volume chosen from the famous Annals of Mathematics journal cover a broad range of topics from across mathematics Each theorem description is essentially self contained can be read independently of the others and requires as little preliminary knowledge as possible Although the sections often start with an informal discussion and toy examples all the necessary definitions are included and each description culminates in the precise formulation of the corresponding theorem Filling the gap between surveys written for mathematicians and popular mathematics this book is intended for readers with a keen interest in contemporary mathematics

Etale Cohomology (PMS-33) J. S. Milne, 1980-04-21 One of the most important mathematical achievements of the past several decades has been A Grothendieck's work on algebraic geometry In the early 1960s he and M Artin introduced etale cohomology in order to extend the methods of sheaf theoretic cohomology from complex varieties to more general schemes This work found many applications not only in algebraic geometry but also in several different branches of number theory and in the representation theory of finite and p adic groups Yet until now the work has been available only in the original massive and difficult papers In order to provide an accessible introduction to etale cohomology J S Milne offers this more elementary account covering the essential features of the theory The author begins with a review of the basic properties of flat and etale morphisms and of the algebraic fundamental group The next two chapters concern the basic theory of etale sheaves and elementary etale cohomology and are followed by an application of the cohomology to the study of the Brauer group After a detailed analysis of the cohomology of curves and surfaces Professor Milne proves the fundamental theorems in etale cohomology those of base change purity Poincaré duality and the Lefschetz trace formula He then applies these theorems to show the rationality of some very general L series Originally published in 1980 The Princeton Legacy Library uses the latest print on demand technology to again make available previously out of print books from the distinguished backlist of Princeton University Press These editions preserve the original texts of these important books while presenting them in durable paperback and hardcover editions The goal of the Princeton Legacy Library is to vastly increase access to the rich scholarly heritage found in the thousands of books published by Princeton University Press since its founding in 1905
