Spencer,2024-02-01 Located on the shore of the Gulf of Argos Lerna is one of the most important prehistoric sites in Greece having been occupied with few interruptions over a period of some 5 000 years from the 6th to the 1st millennium B C Following excavations under the direction of Professor J Caskey from 1952 to 1958 the well preserved deeply stratified record resulted in Lerna becoming the undisputed typesite and master sequence for the Early and Middle Bronze Ages on the southern Greek mainland However the Middle Bronze Age settlement and material have never been comprehensively published This volume presents a catalogue of the Middle Helladic ceramic material and an analysis of

the material in terms of shape decoration and fabric with the objective of elucidating the changing patterns of ceramic production and consumption at a key mainland site Recent Advances in Measuring and Controlling Synaptic Communication Jacopo Lamanna, Mattia Ferro, Emanuele Cocucci, 2023-11-10 Synapses represent a unique neuronal compartment specialized in communication The morpho functional investigation of the synapse has always been hindered by its tiny size and high density of molecular elements but specific technological and methodological advances helped us to reduce these limitations As the matter of fact in recent years we have witnessed the continuous development of new methods allowing measuring and controlling synaptic activation both in vitro and in vivo These include new genetically encoded sensors of synaptic exo endocytosis but also engineered synaptic proteins able to inhibit the release of neurotransmitters Furthermore new promising tools allow changing the functional properties of synapses in a plasticity like manner All these methodological advances are likely to generate unprecedented knowledge about the dynamics of synaptic transmission and plasticity at several levels of the nervous system Nevertheless in most cases the implementation of these new methods remains technically demanding likely due to the high complexity of their operating principle Hence it would be worth refining and potentiating these tools in order to extend the range of experimental settings for their application The Extramural Sanctuary of Demeter and Persephone at Cyrene, Libya, Final Reports, Volume II Gerald P. Pemberton, 2015-09-30 This volume continues the publication of excavations conducted by the American School of Classical Studies at Athens in the Sanctuary of Demeter and Kore on Acrocorinth It incorporates two bodies of material Greek lamps and offering trays The lamps include those made from the 7th through 2nd centuries B C together with a few Roman examples not included in Corinth XVIII 2 They served to provide light and to accompany the rites of sacrifice The offering trays differ from the liknon type offering trays published by A Brumfield they support a variety of vessels rather than types of food and had a symbolic function in the Sanctuary rituals They are extremely common in the Sanctuary and only rarely attested elsewhere Journal of Roman Pottery Studies P. C. Buckland, K. F. Hartley, Valery Rigby, 2017-06-30 Rossington Bridge lies next to the Roman road between Doncaster and Lincoln Excavations between 1956 1961 discovered eight pottery kilns a site of considerable significance The kilns and material from the waster heaps excavated lie on a site with at least fifteen other unexcavated kilns and ancillary structures lying either side of the Roman road The bulk of the finds clearly belong to the main period of activity on the site during the mid 2nd century when the mortarium potter Sarrius and his associates were involved in the production of mortaria parisian fine wares black burnished and grey wares intended for the military markets on the Northern frontier
